Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

----- Project Information

Center project name: L11599

Center clone name: 58_O3

* NOTE: This record contains 32 individual
 * sequencing reads that have not been assembled into
 * contigs. Runs of N are used to separate the reads
 * and the order in which they appear is completely
 * arbitrary. Low-pass sequence sampling is useful for
 * identifying clones that may be gene-rich and allows
 * overlap relationships among clones to be deduced.
 * However, it should not be assumed that this clone
 * will be sequenced to completion. In the event that
 * the record is updated, the accession number will
 * be preserved.

* 1 692: contig of 692 bp in length

TITLE Direct Submission

JOURNAL Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,

Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vegas@sanger.ac.uk

Clone requests: clonerequest@sanger.ac.uk

On Aug 9, 2001 this sequence version replaced gi:15041967.

The following abbreviations are used to associate primary accession

numbers given in the feature table with their source databases:

Em., EMBL; Sw., SWISSPROT; Tr., TREMBL; Wp., WORMPEP; Information

on the WORMPEP database can be found at

http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence

was generated from part of bacterial clone contigs of human

chromosome 10, constructed by the Sanger Centre Chromosome 10

Mapping Group. Further information can be found at
 http://www.sanger.ac.uk/HGP/Chr10

RP11-141H1 is from the library RPCI-11.1 constructed by the group
 of Pieter de Jong. For further details see

http://www.chori.org/bacpac/home.htm

VECTOR: pBAC3.6

----- Genome Center

Center: Wellcome Trust Sanger Institute

Center code: SC

Web site: http://www.sanger.ac.uk

Contact: vegas@sanger.ac.uk

This sequence was finished as follows unless otherwise noted: all
 regions were either double-stranded or sequenced with an alternate
 chemistry or covered by high quality data (i.e., phred quality >=
 30); an attempt was made to resolve all sequencing problems, such
 as compressions and repeats; all regions were covered by at least
 one subclone; and the assembly was confirmed by restriction digest,
 except on the rare occasion of the clone being a YAC.

individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

Project Information

Center project name: FCSW

Center clone name: CH240-39N6

Summary Statistics

Assembly program: Atlas 3.0;

Consensus quality: 186284 bases at least Q40

Consensus quality: 187266 bases at least Q30

Consensus quality: 188115 bases at least Q20

Estimated insert size: 187827; sum-of-contigs estimation

Quality coverage: 6x in Q20 bases; sum-of-contigs estimation

NOTE: Estimated insert size may differ from sequence length

(see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

NOTE: This is a 'working draft' sequence. It currently

consists of 10 contigs. The true order of the pieces

is not known and their order in this sequence record is

arbitrary. Gaps between the contigs are represented as

runs of N, but the exact sizes of the gaps are unknown.

This record will be updated with the finished sequence

as soon as it is available and the accession number will

be preserved.

COMMENT

On Jun 28, 2005 this sequence version replaced gi:58037610.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

COMMENT The International consortium for macaque cDNA sequencing and
analysis consists of: Department of Virology and Human Genome
Center, Institute of Medical Science, The University of Tokyo,
Tokyo, Japan; Division of Genetic Resources, National Institute of
Infectious Diseases of Japan, Tokyo, Japan; National Health
Research Institute, Taipei, Taiwan; Institute of Molecular Biology,

```

Academia Sinica, Taipei, Taiwan; Department of Ecology & Evolution, University of Chicago, Chicago, IL, USA; Center for Information Biology; National Institute of Genetics of Japan, Mishima, Japan. Clone distribution: clone distribution information can be found at: <http://www.nih.go.jp/yoken/genebank/>

Lab host: TOP10

Vector: pME18S-FL3 (Acc.No. AB009864)

R. Site1: DraIII (CACTGTGTC)

R. Site2: DraIII (CACATGTC)

Description: 1st strand cDNA was primed with an oligo(dT) primer (ATGGCCCTTTTCTTTTCTTTT); double-stranded cDNA was synthesized using specific 5' and 3' primers and amplified by PCR. The PCR product was digested with SfiI and size selection was performed to exclude fragments <1.5kb. The SfiI-digested PCR product was cloned into distinct DraIII sites of pME18S-FL3. XhoI sites just outside the DraIII sites can be used to isolate the cDNA insert. Libraries were constructed by oligo-capping method. Libraries were made from:

OccB: cerebellum cortex

QnpA: parietal lobe

QtrA: temporal lobe right

QflA: frontal lobe left

QmoA: medulla oblongata

QbsA: brain stem

QorA: occipital lobe right

QtsA: testis

Custom primers were used for 5' and 3'-end sequencing. The full-insert sequencing was done by primer-walking method using ABI DNA sequencer.

3 (bases 1 to 295920)

Rat Genome Sequencing Consortium.

Direct Submission

Submitted (08-OCT-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Sep 19, 2002 this sequence version replaced gi:21737687.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

Contact: hgsc-help@bcm.tmc.edu

----- Project Information

Center project name: GPON

Center clone name: CH230-292P23

----- Summary Statistics

Assembly program: Phrap; version 0.990329

Consensus quality: 252123 bases at least Q40

Consensus quality: 256495 bases at least Q30

Consensus quality: 259425 bases at least Q20

Estimated insert size: 283308; sum-of-contigs estimation

Quality coverage: 3x in Q20 bases; sum-of-contigs estimation

* NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)

* NOTE: This sequence may represent more than one clone.

* NOTE: This is a 'working draft' sequence. It currently consists of 7 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

* 1

----- Genome Center -----
Center: Washington University Genome Sequencing Center
Center code: WUGSC
Web site: http://genome.wustl.edu/gsc/index.shtml
----- Project Information -----
Center project name: H NH0712115
----- Summary Statistics -----
Sequencing vector: plasmid; 100%
Chemistry: Dye-primer ET; 100% of reads
Assembly: Phrap; version 0.990319
Consensus quality: 145600 bases at least Q40
Consensus quality: 151065 bases at least Q30
Consensus quality: 153390 bases at least Q20
Insert size: 173000; agarose-fp
Insert size: 159360; sum-of-contigs
Quality coverage: 3.35 in Q20 bases; agarose-fp
Quality coverage: 3.73 in Q20 bases; sum-of-contigs
-----
* NOTE: This is a 'working draft' sequence. It currently
* consists of 33 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
*
* 1 1483: contig of 1483 bp in length

3 (bases 1 to 225793)

Direct Submission

Submitted (01-JUN-2005) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Jun 28, 2005 this sequence version replaced gi:58082168.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

----- Project Information

Center project name: FCQG

Center clone name: CH240-47A8

----- Summary Statistics

Assembly program: Atlas 3.0;

Consensus quality: 218147 bases at least Q40

Consensus quality: 219918 bases at least Q30

Consensus quality: 221497 bases at least Q20

Estimated insert size: 222678; sum-of-contigs estimation

Quality coverage: 6x in Q20 bases; sum-of-contigs estimation

* NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently consists of 18 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

COMMENT

On Jun 26, 2005 this sequence version replaced gi:58038108.
 The sequence in this assembly is a combination of BAC based reads
 and whole genome shotgun sequencing reads assembled using Atlas
 (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
 in the feature table below represents a scaffold in the Atlas
 assembly (a 'contig-scaffold'). Within each contig-scaffold,
 individual sequence contigs are ordered and oriented, and separated
 by sized gaps filled with Ns to the estimated size. The sequence
 may extend beyond the ends of the clone and there may be sequence
 contigs within a contig-scaffold that consist entirely of whole
 genome shotgun sequence reads. Both end sequences and whole genome
 shotgun sequence only contigs will be indicated in the feature
 table.

----- Genome Center
 Center: Baylor College of Medicine
 Center code: BCM
 Web site: http://www.hgsc.bcm.tmc.edu/
 Contact: hgsc-help@bcm.tmc.edu
 ----- Project Information
 Center project name: FAXC
 Center clone name: CH240-1K11
 ----- Summary Statistics
 Assembly program: Atlas 3.0;
 Consensus quality: 213949 bases at least Q40
 Consensus quality: 216851 bases at least Q30
 Consensus quality: 219286 bases at least Q20
 Estimated insert size: 214671; sum-of-contigs estimation
 Quality coverage: 5x in Q20 bases; sum-of-contigs estimation

 * NOTE: Estimated insert size may differ from sequence length
 * (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html).
 * NOTE: This is a 'working draft' sequence. It currently
 * consists of 29 contigs. The true order of the pieces
 * is not known and their order in this sequence record is
 * arbitrary. Gaps between the contigs are represented as
 * runs of N, but the exact sizes of the gaps are unknown.
 * This record will be updated with the finished sequence
 * as soon as it is available and the accession number will
 * be preserved.
 * 1 3732: contig of 3732 bp in length
 * 3733 3782: gap of 50 bp
 * 3783 7703: contig of 3921 bp in length
 * 7704 7804: gap of unknown length
 * 7804 10239: contig of 2436 bp in length
 * 10240 10289: gap of 50 bp

 This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one pUC18 subclone; and the assembly was confirmed by restriction digest.

Neighboring sequence information:
 This clone is overlapped by GSI-25117, GSI-287C17.

 Sequence Quality Assessment:

This entry has been annotated with sequence quality estimates computed by the Phrap assembly program. All manually edited bases have been reduced to quality zero. Quality levels above 40 are expected to have less than 1 error in 10,000 bp.

Base-by-base quality values are not generally visible from the GenBank flat file format but are available as part of this entry's ASN.1 file.

Center: Washington University Genome Sequencing Center
Center code: WUGSC
Web site: http://genome.wustl.edu
Contact: submissions@wustl.edu

Center project name: H_NH0024105

NOTICE:
This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate
chemistry, or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by sequence
from more than one subclone; and the assembly was confirmed by
restriction digest.
MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. Wes Warren,
Department of Genetics, Washington University, St. Louis MO. For
additional information about the map position of this sequence, see

http://genome.wustl.edu

SOURCE INFORMATION:

The RPCI-11 human BAC library was made from the blood of one male
donor, as described by Oseogawa,K., Woon,P.Y., Zhao,B., Frengen,E.,
Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved
approach for construction of bacterial artificial chromosome
libraries. Genomics 51:1-8. The clone may be obtained either from
Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong
and coworkers at http://www.chori.org
VECTOR: pBACe3.6

NEIGHBORING SEQUENCE INFORMATION:

The clone sequenced to the left is RP11-559M23; the clone sequenced
to the right is RP11-194L1. Actual start of this clone is at base
position 1 of RP11-2415, actual end is at base position 168813 of
RP11-2415.

of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On Jun 30, 2001 this sequence version replaced gi:14575758.
INFORMATION: <http://www.hgsc.bcm.tmc.edu/> or email
gc-help@bcm.tmc.edu

CLONE LENGTH: This sequence does not necessarily represent the
entire insert of this clone. Overlapping regions of clones are only
sequenced and submitted once, so the sequence for the remainder of
the insert may be found in the record for the adjacent clones.
Overlapping clones are noted at the beginning and end of the
Features listing.

ANNOTATION OF FEATURES:

of SNPs are identified using ePCR (Genome Res. 7:541-550) searches
of a local database that includes entries from dbSTS, GDB, and
local mapping efforts.
Repeats are identified using RepeatMasker (A. Smit and P. Green,
unpublished.) for Human and Mouse sequences.
Genes and Region of sequence similarity are identified by BLAST

(Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

SEQUENCING READ COVERAGE: Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL:
<http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html>.

Center project name: L7538

Center clone name: 658_L_6

* NOTE: This record contains 69 individual
 * sequencing reads that have not been assembled into
 * contigs. Runs of N are used to separate the reads
 * and the order in which they appear is completely
 * arbitrary. Low-pass sequence sampling is useful for
 * identifying clones that may be gene-rich and allows
 * overlap relationships among clones to be deduced.
 * However, it should not be assumed that this clone
 * will be sequenced to completion. In the event that
 * the record is updated, the accession number will
 * be preserved.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
Em:, EMBL; Sw:, SWISSPROT; Tr:, TrEMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormep/Clone-derived Zebrafish pUC subclones occasionally display inconsistency over the length of mononucleotide A/T runs and conserved TA repeats. Where this is found the longest good quality representation will be submitted.

CH211-272H10 is from a CHORI-211 BAC library
VECTOR: pTARBAC2.1

This sequence was finished as follows unless otherwise noted: all

regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.
Any regions longer than 1kb tagged as misc-feature 'unsure' are part of a tandem repeat of more than 10kb in length where it has not been possible to anchor the base differences between repeat copies. The region has been built up based on the repeat element to match the total size of repeat indicated by restriction digest, but repeat copies may not be in the correct order and the usual finishing criteria may not apply.

----- Project Information

Center project name: HQ01

Center clone name: RP11-412M2

----- Summary Statistics

Sequencing vector: Plasmid;

Chemistry: Dye-terminator Big Dye; 100% of reads

Assembly program: Phrap; version 0.990329

Consensus quality: 131977 bases at least Q40

Consensus quality: 14820 bases at least Q30

Consensus quality: 150638 bases at least Q20

Estimated insert size: 3481; sum-of-contigs estimation

Quality coverage: 0x in Q20 bases; sum-of-contigs estimation

* NOTE: Estimated insert size may differ from sequence length

* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a 'working draft' sequence. It currently

* consists of 31 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence.

* as soon as it is available and the accession number will

* be preserved.

* 1 2113: contig of 2113 bp in length

REFERENCE 1
AUTHORS Matthews, L.
TITLE Direct Submission
JOURNAL Submitted (04-APR-2002) Wellcome Trust Sanger Institute, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: humquerry@sanger.ac.uk
COMMENT On Apr 8, 2002 this sequence version replaced gi:19743946. During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above. This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em: EMBL; Sw: SWISSPROT; Tr: TrEMBL; Wp: WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep/ RP23-314B7 is from the RPI-23 Mouse PAC Library constructed by the group of Pieter de Jong. For further details see http://www.chori.org/bacpac/home.htm VECTOR: pBACe3.6.

Center project name: M_BB0222H07

NOTICE:
This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu

SOURCE INFORMATION:
The RPCI-24 BAC Library has been constructed by Pieter de Jong and coworkers (http://www.chori.org) from male C57BL/6J mouse spleen and/or brain genomic DNA. The clone and detailed information can be obtained from Pieter de Jong and coworkers at http://www.chori.org

NEIGHBORING SEQUENCE INFORMATION:
This sequence is the entire insert of the clone.

COMMENT
Direct Submission
Submitted (15-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On Nov 15, 2002 this sequence version replaced gi:23808213.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

Contact: hgsc-help@bcm.tmc.edu
----- Project Information
Center project name: GWFF
Center clone name: CH230-412B6
----- Summary Statistics
Assembly program: Phrap; version 0.990329
Consensus quality: 152401 bases at least Q40
Consensus quality: 154698 bases at least Q30
Consensus quality: 155987 bases at least Q20
Estimated insert size: 154442; sum-of-contigs estimation
Quality coverage: 6x in Q20 bases; sum-of-contigs estimation

* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 1 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submitter.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.
* the accession number will be 164792 bp in length.

Contact: submissions@watson.wustl.edu

----- Summary Statistics

Center project name: M_BB0497H15

NOTICE:

This sequence was finished as follows unless otherwise noted:
 all regions were double stranded, sequenced with an alternate
 chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such
 as compressions and repeats; all regions were covered by at least
 one plasmid subclone, fosmid clone or direct clone walk sequence.
 Sequence from the Mouse Genome Sequencing Consortium whole genome
 shotgun may have been used to obtain the consensus sequence; and
 the assembly was confirmed by restriction digest.

MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. Wes Warren,
 Department of Genetics, Washington University, St. Louis MO. For
 additional information about the map position of this sequence, see
<http://genome.wustl.edu>

SOURCE INFORMATION:

The RPCI-24 BAC Library has been constructed by Pieter de Jong and
 coworkers (<http://www.chori.org>) from male C57BL/6J mouse spleen
 and/or brain genomic DNA. The clone and detailed information can be
 obtained from Pieter de Jong and coworkers at <http://www.chori.org>

NEIGHBORING SEQUENCE INFORMATION:

This sequence is the entire insert of the clone. This clone is
 overlapped by AC133946 and AL592112.

Quality coverage: 3.96x in Q20 bases; sum-of-contigs

* NOTE: This is a 'working draft' sequence. It currently
* consists of 19 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence.
* as soon as it is available and the accession number will
* be preserved.

* 1 2193: contig of 2193 bp in length

XX
XX Claim 1; Page 1511; 2479pp; English.
PS
XX
XX The present invention describes a library of human polynucleotides
CC comprising the sequences given in AA212532 to AA217779. Also described is
CC a method of detecting differentially expressed genes correlated with the
CC cancerous state of a mammalian cell, comprising detecting at least one
CC differentially expressed gene product in a test sample from a cell
CC suspected of being cancerous, where the gene product is encoded by one of
CC the 5248 polynucleotide sequences given in AA212532 to AA217779. The
CC polynucleotides can be used as a source of primers and probes, which can
CC be used for a variety of purpose, e.g. detection of expression levels,
CC mapping, tissue typing or profiling, forensics, genetic analysis and
CC detection of polymorphisms. Polypeptides encoded by the polynucleotides
CC can be used for raising antibodies for experimental, diagnostic and
CC therapeutic purposes. The polynucleotides may also be used to construct
CC arrays for diagnostics (which may be used to determine function of an
CC encoded protein); and to detect differences in expression levels between
CC two cells (e.g. to identify abnormal or diseased tissue in a human, to
CC identify a genetic predisposition or susceptibility to a disease such as
CC cancer). The polynucleotides of the invention are especially used in the
CC diagnosis, prognosis and management of colorectal cancer, breast cancer,
CC and lung cancer. The polynucleotides can also be used to screen for
CC peptide analogues and antagonists

XX Claim 1; SEQ ID NO 222; 509pp; English.
PS
XX
XX The present invention provides the protein and coding sequences of 444
CC novel human proteins. These were isolated from expressed sequences tags
CC (ESTs). They can be used to stimulate cell growth, to regulate
CC haematopoiesis e.g. to treat aplastic anaemia, to help tissue regrowth
CC e.g. in burn treatment, to regulate the immune system e.g. to treat
CC multiple sclerosis, to regulate activin or inhibin e.g. to treat
CC infertility, to regulate haemostasis or thrombolysis e.g. to treat stroke
CC and cancer, to screen for drugs, to treat inflammatory conditions e.g.
CC rheumatoid arthritis, and to treat nervous system disorders e.g. of
CC Parkinson's disease. The present sequence is a coding sequence of the
CC invention

XX New cytoplasmic, nuclear membrane bound or secreted polypeptides (NOVX)
XX and polynucleotides, useful in gene therapy, e.g. for treating or
XX preventing obesity, multiple sclerosis, allergy, cancers, hemophilia,
XX stroke or infections.

XX
XX Claim 20; Page 373-375; 586pp; English.

XX The invention describes a new isolated polypeptide (NOVX). The NOVX
XX polypeptide, nucleic acid and antibody are useful as therapeutics,
XX particularly in the manufacture of a medicament for treating a syndrome
XX associated with a human disease, which includes a pathology associated
XX with NOVX polypeptide. The DNA encoding the protein is useful in gene
XX therapy for treating the disease or condition. In particular, the NOVX
XX polypeptide or polynucleotide is useful for treating endocrine/
XX metabolism-related diseases (e.g. obesity or diabetes), central nervous
XX system disorders (e.g. Alzheimer's disease, Parkinson's disease,
XX epilepsy, multiple sclerosis, schizophrenia or depression), autoimmune
XX and inflammatory disorders (e.g. psoriasis, allergy, lupus erythematosus,
XX asthma, inflammatory bowel disease, rheumatoid arthritis or
XX osteoarthritis), cancers (e.g. colon, lung, liver, breast, ovarian,
XX prostate or brain cancers, or melanoma), liver diseases (e.g. liver
XX cirrhosis), lung diseases (emphysema or obstructive pulmonary disease),
XX haemophilia, stroke, or infections (e.g. viral, bacterial or parasitic).
XX These are also useful in developing powerful assay system for functional
XX analysis of various human disorders, as well as in diagnostic
XX applications, and for monitoring the effects of drugs during clinical
XX trials. This sequence encodes a novel human NOV protein

PT products for the detection, diagnosis, characterisation, prevention and
PT therapy of infections, particularly Lyme disease.
XX
XX Claim 1; Page 1050-1051; 1128pp; English.
XX
XX AAX20248 to AAX20402 represent polynucleotide sequences isolated from
CC Borrelia burgdorferi (Bb). Products derived from Bb can be used for the
CC detection, diagnosis, characterisation, prevention and therapy of Bb
CC infections, e.g. Lyme disease. They can also be used for the production
CC of biosynthetic products, e.g. enzymes. Borrelia belongs to a family of
CC motile, spiral-shaped bacteria called Spirochetes. Spirochetes are
CC pathogenic in humans and Borrelia causes epidemic and endemic relapsing
CC fever, and Lyme borreliosis, more commonly known as Lyme disease

PT New composition comprising two or more isolated polypeptides, useful for
 PT preparing a medicament for treating pain in an animal.
 XX
 PS Claim 1; Page; 1017pp; English.

XX The invention discloses a composition comprising two or more isolated rat
 CC or human polynucleotides or a polynucleotide which represents a fragment,
 CC derivative or allelic variation of the nucleic acid sequence. Also
 CC claimed are a vector comprising the novel polynucleotide, a host cell
 CC comprising the vector, a method for identifying a nucleotide sequence
 CC which is differentially regulated in an animal subjected to pain and a
 CC kit to perform the method, an array, a method for identifying an agent
 CC that increases or decreases the expression of the polynucleotide sequence
 CC that is differentially expressed in neuronal tissue of a first animal
 CC subjected to pain, a method for identifying a compound which regulates
 CC the expression of a polynucleotide sequence which is differentially
 CC expressed in an animal subjected to pain, a method for identifying a
 CC compound that regulates the activity of one or more of the
 CC polynucleotides, a method for producing a pharmaceutical composition, a
 CC method for identifying a compound or small molecule that regulates the
 CC activity in an animal of one or more of the polypeptides given in the
 CC specification, a method for identifying a compound useful in treating
 CC pain and a pharmaceutical composition comprising the one or more
 CC polypeptides or their antibodies. The polynucleotide or the compound that
 CC modulates its activity is useful for preparing a medicament for treating
 CC pain (e.g. spinal segmental nerve injury (Chung), chronic constriction
 CC injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene
 CC therapy). The sequence presented is a rat DNA (shown in Table 2 of the
 CC specification) which encodes one of the polypeptides of the invention
 CC which is differentially expressed during pain. Note: The sequence data
 CC for this patent did not form part of the printed specification, but was
 CC obtained in electronic form directly from WIPO at
 CC ftp.wipo.int/pub/published_pct_sequences.

XX
XX New recombinant DNA construct, useful for improving plant tolerance to
PT cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or
PT pests, for conferring increased resistance to plant disease, or for
PT improving yield.
XX
XX Claim 1; SEQ ID NO 13369; 15pp; English.
XX
XX The invention describes a recombinant DNA construct comprising a
CC polynucleotide consisting of a sequence encoding an amino acid sequence
CC available in electronic form from the US patent office at
CC ftp.segdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide
CC of the invention are also useful in physical arrays of molecules and as
CC plant breeding markers. The recombinant DNA construct is useful for
CC improving plant tolerance to cold, heat, drought, herbicides, extreme
CC osmotic conditions, pathogens or pests, for manipulating growth rate in
CC plant cells by modification of the cell cycle pathway, for conferring
CC increased resistance to plant disease, for producing galactomannan,
CC lignin or plant growth regulators, for increasing the rate of homologous
CC recombination in plants, for improving yield by modification of
CC photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake
CC or by providing improved plant growth and development under at least one
CC stress condition or for modifying seed oil or protein yield and/or
CC content. This sequence represents a plant full length insert
CC polynucleotide that can be used in the recombinant DNA construct of the
CC invention.

XX
XX New recombinant DNA construct comprising a promoter positioned to provide
PT for expression of a polynucleotide encoding a polypeptide from a
PT microbial source, useful for producing plants with improved properties.
XX
XX Claim 1; SEQ ID NO 24074; 122pp; English.
XX
XX The invention relates to a recombinant DNA construct comprising a
CC promoter functional in a plant cell, where the promoter is positioned to
CC provide for expression of a polynucleotide encoding a polypeptide from a
CC microbial source. The invention also relates to a transformed plant
CC comprising the recombinant DNA construct and a method of producing a
CC transformed plant having an improved property. The plant is a crop plant
CC such as maize or soybean. The method of producing a transformed plant
CC having an improved property comprises transforming a plant with the
CC recombinant DNA construct and growing the transformed plant, where the
CC polynucleotide or polypeptide is useful for improving plant properties.
CC The recombinant DNA construct is useful for producing plants with
CC improved plant properties, e.g. improved cold, heat or drought tolerance,
CC tolerance to herbicides, extreme osmotic conditions, pathogens or pests,
CC increased resistance to plant disease, better growth rate by modification
CC of the cell cycle pathway with plant growth regulators, increased rate of
CC homologous recombination, modified seed oil or protein yield and/or
CC content, improved yield by modification of carbohydrate, nitrogen or
CC phosphorus use and/or uptake, by modification of photosynthesis or by
CC providing improved plant growth and development under at least one stress
CC condition, improved lignin production or improved galactomannan
CC production. This sequence represents a bacterial polynucleotide used in
CC the scope of the invention. Note: The sequence data for this patent did
CC not form part of the printed specification but was obtained in electronic
CC format from USPTO at segdata.uspto.gov/sequence.html.

XX
XX The invention relates to novel foetal urogenital sinus-derived expressed
CC sequence tags. The invention more specifically comprises an isolated
CC polynucleotide comprising a nucleotide sequence containing a urogenital
CC sinus-derived expressed sequence tag (EST) comprising g092, ug093, ug101,
CC ug102, ug106, ug120, ug254, ug291, ug307, ug308, ug311, ug317, ug320,

CC ug491, ug493, ug494, ug503, ug505, ug506, ug5148, ug5186 and ug5194. The

CC urogenital sinus-derived expressed sequence tags have cytostatic and anti
CC -inflammatory activities. The genes containing urogenital sinus-derived
CC ESTs encode oncofetal proteins that are useful for diagnosis of prostate
CC disease and for monitoring the efficacy of a compound in clinical trials
CC for the treatment of prostate disease. The ESTs can be used in assays to
CC identify substances (e.g. triple helix forming oligonucleotides,
CC antisense oligonucleotides, ribozymes or antibodies) useful for treating
CC prostate disease, such as prostatitis and benign or malignant growth of
CC the prostate gland. This polynucleotide sequence represents the cDNA of a
CC urogenital sinus-derived expressed sequence tag of the invention.

XX
XX New nucleic acid molecule for diagnosing, preventing or treating diseases
PT such as proliferative (e.g. cancer), inflammatory, immune, metabolic,
PT genetic, bacterial and viral diseases.
XX
XX Claim 1; SEQ ID NO 799; 428pp; English.
XX
XX The present invention relates to an isolated nucleic acid molecule
CC encoding a polypeptide which is believed to be cytostatic,
CC anti-inflammatory, immunosuppressive, antibacterial and virucidal. The
CC composition and methods are useful for diagnosing, preventing and
CC treating diseases such as proliferative (e.g. cancer), inflammatory,
CC immune, metabolic, genetic, bacterial and viral diseases. The present
CC sequence represents a human secreted protein encoding sequence. The
CC present sequence is available on WIPOMEB and is not in the specification.

XX
XX New human genome-derived single exon nucleic acid probes useful for human
PT gene expression analysis, for identifying or characterizing alternative
PT splicing events, for assessing genomic alterations or as tools for
PT surveying tissues.
XX
XX Claim 15; SEQ ID NO 2155; 80pp; English.
XX
XX The invention relates to a nucleic acid probe for measuring human gene
CC expression, comprising any of the 27,400 fully defined nucleotide
CC sequences in the specification, or their complements or fragments, and
CC encoding at least 8 amino acids of any of the 6888 amino acid sequences
CC fully defined in the specification. The probe is a single exon probe that
CC hybridizes under high stringency conditions to a nucleic acid molecule
CC expressed in human cells or tissues. Also included are a spatially-
CC addressable set of single exon nucleic acid probes for measuring human
CC gene expression (comprising a plurality of single exon nucleic acid
CC probes cited above, where each of the plurality of probes is separately
CC and addressably isolatable or amplifiable from the plurality), a single
CC exon microarray for measuring human gene expression, a method of
CC measuring human gene expression, a vector comprising the single exon
CC probe cited above, an ORF-encoded peptide comprising at least 8
CC contiguous amino acids of any of the above-mentioned amino acid
CC sequences (optionally with conservative amino acid substitutions), an
CC isolated antibody that binds specifically to a peptide cited above,
CC methods of selling and/or licensing single exon probes or microarrays to
CC a customer desiring to measure gene expression, a method of providing
CC human gene expression data by subscription, and a computer-readable
CC storage medium which contains a database having a plurality of records
CC (each record including data on the expression of a single exon probe
CC cited above. The probe, methods and apparatus are useful in gene
CC expression analysis. The probes may be used as tools for surveying
CC tissues to detect the presence of expressed messages that contain their
CC specific exon, or in constructing genome-derived single exon microarrays.
CC In addition, the probes are used in identifying and characterising
CC alternative splicing events, in detecting and characterising gross
CC alterations in the genomic locus that includes their exon, in assessing
CC smaller genomic alterations, in priming the synthesis of nucleic acids,
CC or in expressing the ORF-encoded peptide. The present sequence is a human
CC single exon probe of the invention. Note: The sequence data for this
CC patent did not form part of the printed specification, but was obtained
CC in electronic format directly from USPTO at
CC seqdata.uspto.gov/sequence.html?DocID=20030194704

XX
PT Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs.
XX
PS Claim 3; SEQ ID NO 5862; 2537pp + Sequence Listing; English.
XX
CC The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the

CC present invention

XX PT New tumor-associated antigenic target polypeptides and nucleic acids, useful in preparing a medicament for treating or detecting a proliferative disorder, e.g. breast, lung, colorectal, ovarian or prostate cancer or tumor.
XX
PS Claim 1; SEQ ID NO 4237; 7273pp; English.
XX
CC The invention relates to human tumour-associated antigenic target (TAT) polypeptides, and their related nucleic acids. The TAT polypeptides are overexpressed in cancer tissues compared to normal tissues, and may thus serve as effective targets for the diagnosis and treatment of cancer in mammals. The invention also relates to nucleic acid and polypeptide sequences at least 80% identical to the TAT nucleic acids and polypeptides; expression vectors and host cells comprising a TAT nucleic acid; an antibody specific for a TAT polypeptide; a peptide or organic molecule which binds to a TAT polypeptide; fusion proteins comprising a TAT polypeptide; and methods and compositions for the treatment or diagnosis of cancer in mammals. TAT polypeptides, nucleic acids, antibodies, antagonists, binding molecules and compositions are useful for diagnosing or treating a cell proliferative disorder associated with increased TAT expression, particularly cancers such as breast cancer, colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder cancer, pancreatic cancer, cervical cancer, cancers of the central nervous system, melanoma and leukaemia. TAT nucleic acids may further be used as hybridisation probes, in chromosome and gene mapping, in

CC chromosome identification and in gene therapy. The present sequence
CC represents a TAT nucleic acid of the invention

PT	PT	Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs.
PT	PT	

PS Claim 8: SEQ ID NO 10641: 2537bp + Sequence Listing: English.

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dr primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH18742 represent human cDNA sequences; AAH92440 to AAH95893

CC used as hybridisation probes, in chromosome and gene mapping, in
CC chromosome identification and in gene therapy. The present sequence

PT
PS Claim 1; SEQ ID NO 571; 2686pp; English.
XX
XX This invention relates to novel, isolated full length human cDNA
CC molecules and the encoded proteins thereof. Specifically, it refers to
CC cDNA clones obtained by an oligo-capping method, where none of these
CC clones are identical to any known human mRNAs. The present invention
CC describes an immunoassay to identify agonists and antagonists, as well as
CC antibodies, antisense molecules and siRNAs that can all be used to bind
CC to and modulate expression of the cDNA molecules. As such, these
CC molecules are useful for diagnostic markers or therapeutic targets for
CC the various diseases or morbid states. In particular, they are useful in
CC gene therapy for treating osteoporosis, neurological disease, Alzheimer's
CC disease, Parkinson's disease, dementia, short memory and various cancers,
CC as well as for maintaining equilibrium of sense or motor function, and
CC for treating emotional reaction, fear response and panic. Accordingly,
CC they exhibit osteopathic, neuroprotective, nootropic, antiparkinsonian,
CC cytotstatic and tranquiliser activities. This polynucleotide is a full
CC length human cDNA sequence of the invention. NOTE: This sequence is not
CC given in the sequence listing of the specification but can be obtained on

CC CD-ROM from the European Patent Office, Vienna Sub-office.

XX
XX Combination for diagnosing, staging, treating, or monitoring the
PT progression of treatment of a vascular disease, e.g. atherosclerosis,
PT comprises several cDNAs that are differentially expressed in activated
PT vascular tissue.
XX
XX Claim 1; Page; 18pp; English.
PS
XX This invention relates to a combination comprising several cDNAs that are
CC differentially expressed in activated vascular tissue. The invention also
CC discloses a high throughput method for detecting differentially expressed
CC cDNAs in a sample. The cDNAs of the invention may have
CC antiarteriosclerotic; cytostatic; cardiant; hypotensive; antidiabetic;
CC gynaecological; vasotropic and cerebroprotective activities and may be
CC used in gene therapy. The cDNAs of the invention may be used in a high-
CC throughput methods for detecting differential expression of one or more
CC cDNAs in a sample, or screening several molecules or compounds to
CC identify a molecule or compound that specifically binds a cDNA of the
CC invention. A protein encoded by the cDNA may be used to screen several
CC molecules or compounds to identify a ligand that specifically binds to
CC the protein, or to produce or purify an antibody to the protein that can
CC be used to detect a protein in a sample or purify a natural or
CC recombinant protein from a sample. The nucleotides may be useful for
CC diagnosing, staging, treating, or monitoring the progression of treatment
CC of a vascular disease, e.g. atherosclerosis, cancer, coronary artery
CC disease, hypertension, diabetes, pre-eclampsia, ischaemia-reperfusion
CC injury, restenosis, or stroke. The cDNAs can also be used for large-scale
CC genetic or gene expression analysis of several new nucleic acid

CC molecules. Antibodies to the proteins encoded by the cDNAs are useful for
CC diagnosing pre-pathologic disorders, and chronic or acute diseases
CC associated with abnormalities in the expression, amount or distribution
CC of the protein. The present sequence represents a cDNA of the invention
CC that is differentially expressed in activated vascular tissue. Note: The
CC sequence data for this patent did not form part of the specification, but
CC was obtained in electronic format directly from USPTO at
CC <http://seqdata.uspto.gov/sequence.html?DocID=20020137081>

XX New genes regulated by MYCN activation, useful in gene therapy.

PT Particularly for treating a subject with e.g. neuroblastoma or other
PT cancers, or for diagnosing, staging or monitoring the treatment of the
PT cancer.

XX Claim 1; SEQ ID NO 340; 27pp; English.

XX This invention relates to novel isolated cDNAs that are differentially
CC expressed in MYCN activated cells. Specifically, it refers to
CC polynucleotide sequences that exhibit differential expression patterns in
CC cells activated by the transactivator MYCN, where MYCN is a proto-
CC oncogene that is amplified in neuroblastoma cells and is common in small
CC cell lung cancers. The present invention describes these cDNA molecules
CC as useful for in hybridisation assays to detect expression of nucleic
CC acids (or complementary nucleic acids) in a present in a given sample, as
CC well as for screening assays by identifying molecules or compounds that
CC specifically bind the cDNA as a ligand and modulate function or activity.
CC Accordingly, these compositions exhibit cytostatic activity and can also
CC be used for gene therapy purposes. This polynucleotide sequence is a cDNA
CC that is differentially expressed in MYCN activated cells, given in an

CC exemplification of the invention. NOTE: This sequence does not appear in
CC the printed specification but has been obtained in electronic format from
CC the US Patent Office at
CC <ftp://seqdata.uspto.gov/sequence.html?DocID=20030119009>.

XX
XX CC The invention relates to a novel method for testing secondary
CC hyperparathyroidism in a chronic renal failure patient. The method
CC involves detecting a variation in a gene chosen from CACNA1C, CALCL,
CC CH13L1, EGF, FGF1, GFRA1, GPR56, GPRK6, IL10RA, IL12RB1, KCNJ14,
CC KCNQ1, ORCT14, PDGFRA, SCYB14, SLC12A1, SLC2A3, TGFBR3, TMEM1, CALCR,
CC IL17R, OSTF1, FGF6, HGF, MET, TGFBI and VEGF, or detecting the base in a
CC polymorphism region existing in the vicinity of any one of the genes. The
CC invention further comprises a reagent or kit for testing secondary
CC hyperparathyroidism in a chronic renal failure patient. This
CC polynucleotide sequence represents the polymorphism containing human
CC IL12RB1 gene of the invention.

CC The nucleic acid molecules, proteins and antibodies can be used in
CC diagnostic or pharmaceutical compounds e.g. for gene therapy. The methods
CC and nucleic acid molecules, etc. are useful for production of transgenic
CC animals, especially a transgenic mouse for the study of diseases
CC associated with bone development, e.g. spondyloepiphyseal dysplasia and
CC achondroplasia. This sequence encodes the murine LOBO protein described
CC in the method of the invention

XX PT New recombinant nucleic acid comprising a nucleotide sequence of any of
PT the carcinoma-associated (CA) genes, useful for screening for drug
PT candidates for diagnosing or treating carcinomas.

XX PS Claim 1; SEQ ID NO 43; 983pp; English.

XX CC The invention relates to a recombinant nucleic acid comprising a
CC nucleotide sequence selected from any of the fully defined carcinoma-
CC associated (CA) genes from the 50 tables given in the specification. The
CC CA proteins are secreted, transmembrane or intracellular proteins. The
CC recombinant nucleic acids are useful for screening for drug candidates
CC for diagnosing or treating carcinomas. Sequences given in ADC85215-
CC ADC85514 represent CA genes of the invention.

XX PT New recombinant nucleic acid encoding carcinoma associated protein,
XX useful for preparing compositions for treating carcinomas.
XX PS Claim 1; SEQ ID NO 1295; 245pp; English.
XX CC The invention relates to recombinant carcinoma associated (CA) nucleic
XX acid sequences from mouse and human (ADA01482-ADA03094), and to
XX recombinant carcinoma associated proteins (CAP) encoded by them. The
XX invention also encompasses expression vectors and host cells comprising a
XX CA nucleic acid, a polypeptide (especially an antibody) that specifically
XX binds to the protein, and a biochip comprising CA nucleic acid or
XX fragments thereof. The sequences of the invention were identified using
XX oncogenic retroviruses, which insert into the genome of the host organism
XX at random. Many of these do not carry transduced host oncogenes or
XX pathogenic trans-acting viral genes, meaning that cancer incidence is a
XX direct consequence of the effects of proviral integration into host
XX protooncogenes. The CA nucleic acid sequences can be used to diagnose
XX carcinoma (especially breast cancer, prostate cancer, lymphoma or
XX leukaemia) or a propensity to carcinoma by determination of the sequence
XX of a CA gene, or by determination of CA gene expression in particular
XX tissues. CA nucleic acids, proteins and antibodies are also useful as
XX therapeutic agents and in screening and evaluating drug candidates. The
XX present sequence represents a specifically claimed murine CA nucleic acid
XX sequence of the invention. Note: The complete sequence data for this
XX patent did not form part of the printed specification, but was obtained
XX in electronic format directly from WIPO at
XX ftp.wipo.int/pub/published_pct_sequences.

```

CC acid, a recombinant protein, a method of screening for drug candidates, a
CC method of screening for a bioactive agent capable of binding to a
CC carcinoma associated protein (CAP) encoded by a nucleotide sequence, a
CC method of screening for a bioactive agent capable of modulating the
CC activity of a CAP, a method of evaluating the effect of a candidate
CC carcinoma drug, a method of diagnosing carcinoma, a method for inhibiting
CC the activity of a CAP, a method of treating carcinomas, a method of
CC neutralising the effect of a CAP and a method of diagnosing carcinoma or
CC propensity to carcinoma. A method of evaluating the effect of a candidate
CC carcinoma drug comprises administering the drug to a patient, removing a
CC cell sample from the patient and determining alterations in the
CC expression or activation of a gene comprising the nucleotide sequence. A
CC method of diagnosing carcinoma comprises determining the expression of
CC one or more genes comprising the nucleic acid sequence in a first tissue
CC type of a first individual and comparing the expression of the gene from
CC a second normal tissue type from the first individual or a second
CC unaffected individual, where a difference in the expression indicates
CC that the first individual has carcinoma. A method of inhibiting the
CC activity of a CAP comprises binding an inhibitor to the CAP. Treating
CC carcinomas comprises administering to a patient an inhibitor of CAP.
CC Neutralising the effect of a CAP comprises contacting an agent specific
CC for the CAP. The polypeptide specifically binds to the protein encoded by
CC the nucleic acid. It comprises an antibody that specifically binds to the
CC protein encoded by the nucleic acid. The nucleic acids are useful for
CC preparing a composition for diagnosing or treating carcinoma e.g.,
CC leukaemia or lymphoma. This sequence represents a murine carcinoma
CC associated (CA) nucleic acid of the invention. Note: The sequence data
CC for this patent did not form part of the printed specification but was
CC obtained in electronic format directly from USPTO at
CC seqdata.uspto.gov/sequence.html.

XX
XX
PS Disclosure; SEQ ID NO 134; 198pp; English.
XX
XX
CC The invention relates to a nucleic acid array for detecting a cancer
CC associated (CA) nucleic acid, comprising two or more nucleic acid probes.
CC The invention also relates to a peptide array comprising two or more
CC isolated polypeptides encoded by a CA nucleic acid sequence, a compound
CC that binds to a polypeptide, an isolated antibody or its fragment which
CC binds to a polypeptide, which is prepared by immunizing a host animal
CC with a composition comprising the polypeptide or its antigen binding
CC fragment and collecting cells from the host expressing antibodies against
CC the antigen or its antigen binding fragment, a composition comprising the
CC antibody and a carrier, a method of screening for anticancer activity, a
CC method of detecting a CA nucleic acid, a method of diagnosing cancer, a
CC method of treating cancer and a method of inhibiting expression of a CA
CC nucleic acid in a cell. The CA nucleic acids are useful for detecting CA
CC nucleic acids. The antibody is useful for detecting the presence or
CC absence of cancer cells in an individual which involves contacting cells
CC from the individual with the antibody and detecting a complex of a CA
CC protein from the cancer cells and the antibody, where the detection of
CC the complex correlates with the presence of cancer cells in the
CC individual. The composition is useful for inhibiting growth of cancer
CC cells in an individual or for delivering a therapeutic agent to cancer
CC cells in an individual. The invention is also useful for diagnosing
CC cancer, for treating cancer and for inhibiting expression of a CA gene in
CC a cell. This sequence represents murine cancer-associated genomic DNA of
CC the invention.

PT treating or preventing cancer.
XX
XX Claim 16; SEQ ID NO 16; 143pp; English.
XX
XX The present invention describes human cancer-associated (CA) nucleotide
CC sequences (1). Also described: (1) an expression vector comprising (1);
CC (2) a host cell comprising (1) or the expression vector; (3) a microarray
CC for detecting a CA nucleic acid; (4) an isolated polypeptide encoded
CC within an open reading frame of a CA sequence; (5) an isolated antibody,
CC or its antigen binding fragment, that binds to the above polypeptide; (6)
CC a hybridoma that produces the monoclonal antibody described above; (7) a
CC pharmaceutical composition comprising the antibody and a pharmaceutical
CC excipient; (8) a kit for detecting or diagnosing cancer cells, comprising
CC the above (monoclonal) antibody or polynucleotide that selectively
CC hybridizes to any of the polynucleotide sequences mentioned above; (9)
CC methods for diagnosing cancer or for detecting the presence or absence of
CC cancer cells in an individual; (10) a method for inhibiting growth of
CC cancer cells in an individual; (11) a method for delivering a therapeutic
CC agent to cancer cells in an individual; (12) an electronic library
CC comprising the polynucleotide or polypeptide, or their fragments,
CC mentioned above; (13) a method of screening for anticancer activity; (14)
CC methods for detecting cancer associated with expression of a polypeptide
CC or the presence of the antibody in a test cell or serum sample; (15) a
CC method for screening for a bioactive agent capable of modulating the
CC activity of a CA protein encoded by the above nucleic acid molecule; and
CC (16) a method for treating cancers. (1) has cytostatic activity, and can
CC be used in gene therapy, in vaccines, as a tyrosine kinase antagonist,
CC and as a G-protein coupled receptor antagonist. The compositions and
CC methods of the present invention can be used for diagnosing, preventing
CC and treating cancer, especially lymphomas. They may also be used in
CC screening for agents that may be used for treating or preventing cancer.
CC The present sequence represents a human CA gene sequence, which is given
CC in the exemplification of the present invention. Note: The sequence data
CC for this patent did not form part of the printed specification, but was
CC obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences.

XX improving yield.
XX
XX Claim 1; SEQ ID NO 219; 15pp; English.
XX
XX The invention describes a recombinant DNA construct comprising a
CC polynucleotide consisting of a sequence encoding an amino acid sequence
CC available in electronic form from the US patent office at
CC ftp.segdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide
CC of the invention are also useful in physical arrays of molecules and as
CC plant breeding markers. The recombinant DNA construct is useful for
CC improving plant tolerance to cold, heat, drought, herbicides, extreme
CC osmotic conditions, pathogens or pests, for manipulating growth rate in
CC plant cells by modification of the cell cycle pathway, for conferring
CC increased resistance to plant disease, for producing galactomannan,
CC lignin or plant growth regulators, for increasing the rate of homologous
CC recombination in plants, for improving yield by modification of
CC photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake
CC or by providing improved plant growth and development under at least one
CC stress condition or for modifying seed oil or protein yield and/or
CC content. This sequence represents a plant full length insert
CC polynucleotide that can be used in the recombinant DNA construct of the
CC invention.

XX (HUMA-) HUMAN GENOME SCI INC.
XX
XX Rosen CA, Barash SC, Ruben SM;
XX
XX WPI; 2001-541565/60.
XX
XX Nucleic acids encoding 3224 human nervous system antigen polypeptides,
PT useful for preventing, diagnosing and/or treating nervous system cancers
PT and metastases.
XX
XX Disclosure; SEQ ID NO 12436; 1701pp + Sequence Listing; English.
XX
XX The invention relates to novel genes (ABAI1004-ABA21534) and proteins
CC (ABBI4678-ABBI8001) useful for preventing, treating or ameliorating
CC medical conditions e.g. by protein or gene therapy. The genes are
CC isolated from a range of human tissues disclosed in the specification.
CC The nucleic acids, proteins, antibodies and (ant)agonists are useful in
CC the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and
CC ovarian cancer and other cancers of the adrenal gland, bone, bone marrow,
CC breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune
CC disorders e.g. Addison's disease, allergies, autoimmune haemolytic
CC anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease,
CC multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c)
CC cardiovascular disorders such as myocardial ischaemias; (d) wound healing
CC ; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f)
CC infectious diseases such as viral, bacterial, fungal and parasitic
CC infections. Note: The sequence data for this patent did not form part of
CC the printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX
XX Recombinant nucleic acid useful for diagnosis and treatment of carcinoma
PT comprises a nucleotide sequence.
XX
XX Claim 1; SEQ ID NO 103; Opp; English.
XX
XX The present invention relates to novel DNA and protein sequences which
CC are associated with carcinomas. The sequences are useful for: (i) for
CC screening drug candidates; (ii) for screening of bioactive agent capable
CC of binding to Carcinoma Associated Protein (CAP); (iii) for screening of
CC a bioactive agent capable of modulating the activity of CAP; (iv) for
CC evaluating the effect of a candidate carcinoma drug; (v) for diagnosing
CC carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating
CC carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip;
CC (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for
CC determining Carcinoma Associated (CA) gene copy number. In addition, the
CC CA genes are useful as DNA vaccines and the CAP are useful as markers of
CC carcinoma including lymphoma. The present sequence is one such CA coding
CC sequence. Note: This patent is an equivalent to basic patent
CC US2002182586A1, for which no sequence data was published

XX

XX Claim 1; SEQ ID NO 3090; 30pp; English.
PS
XX
CC The invention relates to a substantially purified nucleic acid molecule
CC that encodes a cotton protein or its fragment comprising an EST
CC (expressed sequence tag) appearing as ADP9090-ADP95919. Also included
CC are a substantially purified cotton protein or its fragment encoded by a
CC nucleic acid molecule above and a transformed plant (having a nucleic
CC acid molecule which comprises: an exogenous promoter region which
CC functions in a plant cell to cause the production of a mRNA molecule; a
CC structural nucleic acid molecule comprising one of the ESTs or their
CC complements; a 3' non-translated sequence that functions in the plant
CC cell to cause termination of transcription and addition of polyadenylated
CC ribonucleotides to a 3' end of the mRNA molecule). The ESTs are useful as
CC molecular tool for the targeting and isolation of novel genes for plant
CC protection and improvement. The ESTs are useful for developing new
CC strategies for understanding critical plant developmental and metabolic
CC pathways, for isolating genes and promoters, for identifying and mapping
CC the genes involved in developmental and metabolic pathways, and for
CC determining gene function. The cotton nucleic acid molecules are useful
CC as molecular tags to isolate genetic regions, isolate genes, map genes,
CC and determine gene function. The nucleic acid molecules are useful for
CC determining if genes are members of a particular gene family and for use
CC in marker-assisted breeding programs. The present sequence is one of the
CC 4930 cotton ESTs of the invention. NOTE: The sequences are not displayed
CC in the specification but are available in electronic format from the
CC USPTO at seqdata.uspto.gov/sequence.html?docID=20040123338.

/clone_lib="UI-R-C0"
/notes="Vector: pT7T3D-Pac (Pharmacia) with a modified
polylinker; Site 1: Not I; Site 2: Eco RI; The UI-R-C0
library is a subtracted library derived from the UI-R-A1
and UI-R-E1 libraries. The UI-R-A1 library consisted of a
mixture of individually tagged normalized libraries
constructed from rat placenta, adult lung, brain, liver,
kidney, heart, spleen, ovary, and muscle. The UI-R-E1
library consisted of a mixture of individually tagged
normalized libraries constructed from 8, 12 and 18-day
embryo. The tag is a string of 3-5 nucleotides present
between the Not I site and the oligo-dT track which
allows identification of the library of origin of a clone
within the mixture. The subtracted library (UI-R-C0) was
constructed as follows: PCR amplified cDNA inserts from a
pool of UI-R-A1 and UI-R-E1 clones from which 3' ESTs had
been derived was used as a driver in a hybridization with
the pooled UI-R-A1 and UI-R-E1 library in the form of
single-stranded circles. The remaining single-stranded
circles (subtracted library) was purified by
hydroxyapatite column chromatography, converted to
double-stranded circles and electroporated into DH10B
bacteria (Life Technologies) to generate the UI-R-C0
library. This procedure has been previously described
(Bonaldo, Lennon and Soares, Genome Research 6: 791-806,
1996)"

This is a long-transcript enriched cDNA library (Ref.
Genome Res. 11: 1553-1558 (2001). [PMID: 11544199]). Total
RNAs were extracted from a pool of 3 embryos at 11.5-days
postcoitum. Double-stranded cDNAs were synthesized with an
Oligo(dT) primer [Invitrogen]:
5'-pGACTAGTCTAGATCGGAGCGCCGCTTTT-3' from
2ug of total RNA, treated with T4 DNA polymerase, and
purified by ethanol-precipitation. The cDNAs were ligated
to lone-linker L1-Sal4, purified by phenol/chloroform, and
separated from free linkers by Centricon 100. Then, the
cDNAs were amplified by long-range high fidelity PCR using
Ex Taq polymerase (Takara) with a primer Sal4-S. The
products were purified by phenol/chloroform and Centricion
100. The cDNAs were digested with SalI and NotI enzymes
and cloned into SalI/NotI site of pCMV-SPORT6 plasmid
vector. The DH10B E. coli host was transformed with the
ligation mixture by the standard chemical method. The
average insert size is about 3.3Kb. The library was
constructed by Yulan Piao."

 Division of Experimental Animal Research in Riken contributed to
 prepare mouse tissues.
 Tissues were provided by Michela Fagioli and Takao K. Hensch (
 Laboratory for Neuronal Circuit Development Brain Science Institute
 RIKEN 2-1 Hirotsawa, Wako-shi, Saitama 351-0198 Japan) whose
 assistance we gratefully acknowledge.
 Please visit our web site (http://genome.gsc.riken.go.jp) for
 further details.

the JGI Clone Id and the direction of sequencing. The suffix '.rev' indicates a reverse sequencing read of the insert. It does not necessarily reflect the orientation of the insert.
 Poly-A: Based upon the presence of a run of 14 or more T residues at the beginning of the sequence, this clone was polyadenylated.
 The resulting Poly-T sequence has been removed.
 Small Insert: Based upon one or more sequencing reads of this clone where vector sequence was present at both ends, this clone has been determined to contain a cDNA insert on the order of 600-1000 bases.

BU254969 634 bp mRNA linear EST 26-NOV-2002
LOCUS 603414046F1 CSEQCHN38 Gallus gallus cDNA clone CHEST335111 5', mRNA
DEFINITION sequence.
ACCESSION BU254969
VERSION BU254969.1 GI:25511230
KEYWORDS EST.
SOURCE Gallus gallus (chicken)
ORGANISM Gallus gallus

REFERENCE 1 (bases 1 to 634)
AUTHORS Boardman, P.E., Sanz-Ezquerro, J., Overton, I.M., Burt, D.W., Bosch, E., Fong, W.T., Tickle, C., Brown, W.R.A., Wilson, S.A. and Hubbard, S.J.
TITLE A Comprehensive Collection of Chicken cDNAs
JOURNAL Curr. Biol. 12 (22), 1965-1969 (2002)
PUBMED 12445392
COMMENT Contact: Simon Hubbard
Department of Biomolecular Sciences
University of Manchester Institute of Science and Technology (UMIST)
PO Box 88, Manchester, M60 1QD, UK
Tel: 01612008930
Fax: 01612360409

FEATURES
source
1..634
/organism="Gallus gallus"
/mol_type="mRNA"
/strain="White Leghorn, Hisex"
/db_xref="taxon:9031"
/clone="CHEST335111"
/dev_stage="36"
/lab_host="DH10B"
/clone_lib="CSEQCHN38"
/note="Organ: limbs; Vector: pBluescript II KS(+); Site: 1: EcoRI; Site 2: NotI; This normalized library was constructed from 1 million independent clones. cDNA synthesis was initiated using an oligo(dT) primer, using methylated C in the first strand synthesis reaction. Following this first strand reaction, double-stranded cDNA was blunted, ligated to NotI adapters, digested with EcoRI, size-selected, and cloned into the NotI and EcoRI compatible sites of a custom modified MCS of the pBluescript (KS+) vector. The library was normalized in 2 rounds using conditions adapted from Soares et al., PNAS (1994) 91: 9228-9232 and Bonaldo et al., Genome Research 6 (1996): 791, except that a significantly longer reannealing hybridization was used."

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Direct Submission
Submitted (01-JAN-2004) Department of Genetics, Washington
University, 4444 Forest Park Avenue, St. Louis, Missouri 63108, USA
On Dec 4, 2003 this sequence version replaced gi:29135708.
----- Genome Center
Center: Washington University Genome Sequencing Center
Center code: WUGSC
Web site: <http://genome.wustl.edu>
Contact: submissions@wustl.wustl.edu
----- Summary Statistics

Center project name: M_BB0458F14

NOTICE: This sequence may not represent the entire insert of this
clone. It may be shorter because we only sequence overlapping
clone sections once, or longer because we provide a small overlap
between neighboring data submissions.

This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate
chemistry, or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by sequence
from more than one subclone; and the assembly was confirmed by
restriction digest.

MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. Wes Warren,
Department of Genetics, Washington University, St. Louis MO. For
additional information about the map position of this sequence, see
<http://genome.wustl.edu>

SOURCE INFORMATION:

The RPCI-24 BAC Library has been constructed by Pieter de Jong and
coworkers (<http://www.chori.org>) from male C57BL/6J mouse spleen
and/or brain genomic DNA. The clone and detailed information can be
obtained from Pieter de Jong and coworkers at <http://www.chori.org>

NEIGHBORING SEQUENCE INFORMATION:

This sequence is the entire insert of the clone. This clone is
overlapped by AC134563 and AC127271.

COMMENT

Submitted (12-FEB-2005) Wellcome Trust Sanger Institute, Hinxton,
 Cambridgeshire, CB10 1SA, UK. E-mail enquiries:
 humquery@sanger.ac.uk
 On Feb 14, 2005 this sequence version replaced gi:58331666.
 Sequence from the Mouse Genome Sequencing Consortium whole genome
 shotgun may have been used to confirm this sequence. Sequence data
 from the whole genome shotgun alone has only been used where it has
 a phred quality of at least 30.

----- Genome Center

Center: Wellcome Trust Sanger Institute

Center code: SC

Web site: http://www.sanger.ac.uk

Contact: humquery@sanger.ac.uk

During sequence assembly data is compared from overlapping clones.
 Where differences are found these are annotated as variations
 together with a note of the overlapping clone name. Note that the
 variation annotation may not be found in the sequence submission
 corresponding to the overlapping clone, as we submit sequences with
 only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all
 regions were either double-stranded or sequenced with an alternate
 chemistry or covered by high quality data (i.e., phred quality >= 30);
 an attempt was made to resolve all sequencing problems, such
 as compressions and repeats; all regions were covered by at least
 one plasmid subclone or more than one M13 subclone; and the
 assembly was confirmed by restriction digest, except on the rare
 occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession
 numbers given in the feature table with their source databases:
 Em., EMBL; Swi, SWISSPROT; Tr., TREMBL; Wp., WORMPEP; Information

on the WORMPEP database can be found at
http://www.sanger.ac.uk/projects/C_elegans/wormpep/23-362B9 is
from the RP21-23 Mouse BAC Library
constructed by the group of Pieter de Jong.
For further details see http://www.chori.org/bacpac/home.htm
VECTOR: pBACE3.6.

COMMENT

Submitted (09-OCT-2004) Wellcome Trust Sanger Institute, Hinxton,
Cambridgeshire, CB10 1SA, UK. E-mail enquiries:
humquerry@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
On Oct 10, 2004 this sequence version replaced gi:53850270.
Sequence from the Mouse Genome Sequencing Consortium whole genome
shotgun may have been used to confirm this sequence. Sequence data
from the whole genome shotgun alone has only been used where it has
a phred quality of at least 30.

JOURNAL Submitted (15-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

COMMENT

On Nov 15, 2002 this sequence version replaced gi:23195560. The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

Direct Submission
Submitted (25-APR-2002) Wellcome Trust Sanger Institute, Hinxton,
Cambridgeshire, CB10 1SA, UK. E-mail enquiries:
humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
On Apr 29, 2002 this sequence version replaced gi:20068562.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one plasmid subclone or more than one M13 subclone; and the
assembly was confirmed by restriction digest. The following
abbreviations are used to associate primary accession numbers given

in the feature table with their source databases: Em., EMBL; Sw., SWISSPROT; Tr., TREMBL; Wp., WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep RP23-391E6 is from the RPCI-23 Mouse PAC Library constructed by the group of Pieter de Jong. For further details see <http://www.chori.org/bacpac/home.htm>

COMMENT

```

Sequence from the Mouse Genome Sequencing Consortium whole genome
shotgun may have been used to confirm this sequence. Sequence data
from the whole genome shotgun alone has only been used where it has
a phred quality of at least 30.
----- Genome Center
Center: Wellcome Trust Sanger Institute
Center code: SC
Web site: http://www.sanger.ac.uk
Contact: humquery@sanger.ac.uk
-----

```

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above. This sequence was finished as follows unless otherwise noted: all

regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em., EMBL; Sw., SWISSPROT; Tr., TREMBL; Wp., WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep RP23-232H13 is from the RPCI-23 Mouse BAC Library constructed by the group of Pieter de Jong.

----- Project Information
Center project name: GVVO
Center clone name: CH230-245G5
----- Summary Statistics
Assembly program: Phrap; version 0.990329
Consensus quality: 182925 bases at least Q40
Consensus quality: 183784 bases at least Q30
Consensus quality: 184265 bases at least Q20
Estimated insert size: 188977; sum-of-contigs estimation
Quality coverage: 6x in Q20 bases; sum-of-contigs estimation
-----
* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 1 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submitter.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.
* 1 190928: contig of 190928 bp in length.

1 (bases 1 to 193326)

Almeida,J.

Direct Submission

Submitted (18-MAY-2004) Wellcome Trust Sanger Institute, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk

On May 18, 2004 this sequence version replaced gi:46934930.

Sequence from the Mouse Genome Sequencing Consortium whole genome shotgun may have been used to confirm this sequence. Sequence data from the whole genome shotgun alone has only been used where it has a phred quality of at least 30.

----- Genome Center

Center: Wellcome Trust Sanger Institute

Center code: SC

Web site: http://www.sanger.ac.uk

Contact: humquery@sanger.ac.uk

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WormPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep

from the RPCI-23 Mouse BAC library constructed by the group of Pieter de Jong.

For further details see http://www.chori.org/bacpac/home.htm

VECTOR: pBACe3.6.

During sequence assembly data is compared from overlapping clones.	
Where differences are found these are annotated as variations	
together with a note of the overlapping clone name. Note that the	
variation annotation may not be found in the sequence submission	
corresponding to the overlapping clone, as we submit sequences with	
only a small overlap as described above.	
This sequence was finished as follows unless otherwise noted: all	
regions were either double-stranded or sequenced with an alternate	
chemistry or covered by high quality data (i.e., phred quality >=	
30); an attempt was made to resolve all sequencing problems, such	
as compressions and repeats; all regions were covered by at least	
one plasmid subclone or more than one M13 subclone; and the	
assembly was confirmed by restriction digest. The following	
abbreviations are used to associate primary accession numbers given	
in the feature table with their source databases: Em:, EMBL; Sw:,	
SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP	
database can be found at	
http://www.sanger.ac.uk/Projects/C_elegans/wormpep RP23-360A2 is	
from the RPCI-23 Mouse PAC library	
constructed by the group of Pieter de Jong.	
For further details see http://www.chori.org/bacpac/home.htm

COMMENT
On Nov 20, 2001 this sequence version replaced gi:16304740.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one plasmid subclone or more than one M13 subclone; and the
assembly was confirmed by restriction digest. The following
abbreviations are used to associate primary accession numbers given
in the feature table with their source databases: Em.: EMBL; Sw.:
SWISSPROT; Tr.: TrEMBL; Wp.: WORMPEP; Information on the WORMPEP
database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep
from the RPCI-23 Mouse PAC Library
constructed by the group of Pieter de Jong.
For further details see http://www.chori.org/bacpac/home.htm
VECTOR: pBACE3.6
This sequence is the entire insert of clone RP23-382C19. The true
left end of clone RP23-434F13 is at 189808 in this sequence. The
true right end of clone RP23-328K2 is at 49590 in this sequence.

Direct Submission
Submitted (09-NOV-2002) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On Nov 9, 2002 this sequence version replaced gi:23101319.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

3 (bases 1 to 217867)
Rat Genome Sequencing Consortium.
Direct Submission
Submitted (09-MAY-2003) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On May 9, 2003 this sequence version replaced gi:24940815.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

Contact: hgsc-help@bcm.tmc.edu

----- Project Information -----

Center project name: GCTH

Center clone name: CH230-813

----- Summary Statistics -----

Assembly program: Atlas;

Consensus quality: 205299 bases at least Q40

Consensus quality: 207638 bases at least Q30

Consensus quality: 208930 bases at least Q20

Estimated insert size: 216123; sum-of-contigs estimation

Quality coverage: 8x in Q20 bases; sum-of-contigs estimation

* NOTE: Estimated insert size may differ from sequence length
(see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a 'working draft' sequence. It currently
consists of 3 contigs. The true order of the pieces

is not known and their order in this sequence record is

arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence
 * as soon as it is available and the accession number will
 * be preserved.

* 1 65534: contig of 65534 bp in length
 * 65535 65634: gap of unknown length
 * 65635 182468: contig of 116834 bp in length
 * 182469 182568: gap of unknown length
 * 182569 217867: contig of 35299 bp in length.

JOURNAL Submitted (19-SEP-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

COMMENT On Sep 19, 2002 this sequence version replaced gi:21909406. The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). As a result, the sequence may extend beyond the ends of the clone and there may be contigs that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

Quality coverage: 4x in Q20 bases; sum-of-contigs estimation

* NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Submitted (15-NOV-2002) Human Genome Sequencing Center, Department

of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Nov 15, 2002 this sequence version replaced gi:23265039. The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

 The sequence in this assembly is a combination of BAC based reads
 and whole genome shotgun sequencing reads assembled using Atlas
 (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). As a result, the
 sequence may extend beyond the ends of the clone and there may be
 contigs that consist entirely of whole genome shotgun sequence
 reads. Both end sequences and whole genome shotgun sequence only
 contigs will be indicated in the feature table.

Rat Genome Sequencing Consortium.

Direct Submission

Submitted (10-MAY-2003) Human Genome Sequencing Center, Department
 of Molecular and Human Genetics, Baylor College of Medicine, One
 Baylor Plaza, Houston, TX 77030, USA

On May 10, 2003 this sequence version replaced gi:25139811.

The sequence in this assembly is a combination of BAC based reads
 and whole genome shotgun sequencing reads assembled using Atlas
 (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
 in the feature table below represents a scaffold in the Atlas
 assembly (a 'contig-scaffold'). Within each contig-scaffold,
 individual sequence contigs are ordered and oriented, and separated
 by sized gaps filled with Ns to the estimated size. The sequence
 may extend beyond the ends of the clone and there may be sequence
 contigs within a contig-scaffold that consist entirely of whole
 genome shotgun sequence reads. Both end sequences and whole genome
 shotgun sequence only contigs will be indicated in the feature
 table.

XX
XX New composition comprising two or more isolated polypeptides, useful for
XX preparing a medicament for treating pain in an animal.
XX
XX Example 1; Page; 1017pp; English.
XX
XX The invention discloses a composition comprising two or more isolated rat
XX or human polynucleotides or a polynucleotide which represents a fragment,
XX derivative or allelic variation of the nucleic acid sequence. Also
XX claimed are a vector comprising the novel polynucleotide, a host cell
XX comprising the vector, a method for identifying a nucleotide sequence
XX which is differentially regulated in an animal subjected to pain and a
XX kit to perform the method, an array, a method for identifying an agent
XX that increases or decreases the expression of the polynucleotide sequence
XX that is differentially expressed in neuronal tissue of a first animal
XX subjected to pain, a method for identifying a compound which regulates
XX the expression of a polynucleotide sequence which is differentially
XX expressed in an animal subjected to pain, a method for identifying a
XX compound that regulates the activity of one or more of the
XX polynucleotides, a method for producing a pharmaceutical composition, a
XX method for identifying a compound or small molecule that regulates the
XX activity in an animal of one or more of the polypeptides given in the
XX specification, a method for identifying a compound useful in treating
XX pain and a pharmaceutical composition comprising the one or more
XX polypeptides or their antibodies. The polynucleotide or the compound that
XX modulates its activity is useful for preparing a medicament for treating
XX pain (e.g. spinal segmental nerve injury (Chung), chronic constriction
XX injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene
XX therapy). The sequence presented is a human DNA (described in Table 3 of
XX the specification) which encodes one of the polypeptides of the invention
XX which is differentially expressed during pain. Note: The sequence data
XX for this patent did not form part of the printed specification, but was
XX obtained in electronic form directly from WIPO at
XX ftp.wipo.int/pub/published_pct_sequences.

XX
XX PT Nucleic acid array useful for detecting cancer associated nucleic acid,
XX comprises two or more nucleic acid probes.
XX
XX PS Disclosure; SEQ ID NO 666; 198pp; English.
XX
XX CC The invention relates to a nucleic acid array for detecting a cancer
XX associated (CA) nucleic acid, comprising two or more nucleic acid probes.
XX The invention also relates to a peptide array comprising two or more
XX isolated polypeptides encoded by a CA nucleic acid sequence, a compound
XX that binds to a polypeptide, an isolated antibody or its fragment which
XX binds to a polypeptide, which is prepared by immunizing a host animal
XX with a composition comprising the polypeptide or its antigen binding
XX fragment and collecting cells from the host expressing antibodies against
XX the antigen or its antigen binding fragment, a composition comprising the
XX antibody and a carrier, a method of screening for anticancer activity, a
XX method of detecting a CA nucleic acid, a method of inhibiting expression of a CA
XX method of treating cancer and a method of inhibiting expression of a CA
XX nucleic acid in a cell. The CA nucleic acids are useful for detecting CA
XX nucleic acids. The antibody is useful for detecting the presence or
XX absence of cancer cells in an individual which involves contacting cells
XX from the individual with the antibody and detecting a complex of a CA
XX protein from the cancer cells and the antibody, where the detection of
XX the complex correlates with the presence of cancer cells in the
XX individual. The composition is useful for inhibiting growth of cancer
XX cells in an individual or for delivering a therapeutic agent to cancer
XX cells in an individual. The invention is also useful for diagnosing
XX cancer, for treating cancer and for inhibiting expression of a CA gene in
XX a cell. This sequence represents murine cancer-associated genomic DNA of
XX the invention.

PT Recombinant nucleic acid useful for diagnosis and treatment of carcinoma
PT comprises a nucleotide sequence.
XX
XX
PS Claim 1; SEQ ID NO 745; Opp; English.
XX
XX
CC The present invention relates to novel DNA and protein sequences which
CC are associated with carcinomas. The sequences are useful for: (i) for
CC screening drug candidates; (ii) for screening of bioactive agent capable
CC of binding to Carcinoma Associated Protein (CAP); (iii) for screening of
CC a bioactive agent capable of modulating the activity of CAP; (iv) for
CC evaluating the effect of a candidate carcinoma drug; (v) for diagnosing
CC carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating
CC carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip;
CC (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for
CC determining Carcinoma Associated (CA) gene copy number. In addition, the
CC CA genes are useful as DNA vaccines and the CAP are useful as markers of
CC carcinoma including lymphoma. The present sequence is one such CA coding
CC sequence. Note: This patent is an equivalent to basic patent
CC US200218236A1, for which no sequence data was published

PT New recombinant nucleic acid encoding carcinoma associated protein,
PT useful for preparing compositions for treating carcinomas.
XX
XX
PS Claim 1; SEQ ID NO 1547; 245pp; English.
XX
XX
CC The invention relates to recombinant carcinoma associated (CA) nucleic
CC acid sequences from mouse and human (ADA01482-ADA03094), and to
CC recombinant carcinoma associated proteins (CAP) encoded by them. The
CC invention also encompasses expression vectors and host cells comprising a
CC CA nucleic acid, a polypeptide (especially an antibody) that specifically
CC binds to the protein, and a biochip comprising CA nucleic acid or
CC fragments thereof. The sequences of the invention were identified using
CC oncogenic retroviruses, which insert into the genome of the host organism
CC at random. Many of these do not carry transduced host oncogenes or
CC pathogenic trans-acting viral genes, meaning that cancer incidence is a
CC direct consequence of the effects of proviral integration into host
CC protooncogenes. The CA nucleic acid sequences can be used to diagnose
CC carcinoma (especially breast cancer, prostate cancer, lymphoma or
CC leukaemia) or a propensity to carcinoma by determination of the sequence

```

CC of a CA gene, or by determination of CA gene expression in particular
 CC tissues. CA nucleic acids, proteins and antibodies are also useful as
 CC therapeutic agents and in screening and evaluating drug candidates. The
 CC present sequence represents a specifically claimed murine CA nucleic acid
 CC sequence of the invention. Note: The complete sequence data for this
 CC patent did not form part of the printed specification, but was obtained
 CC in electronic format directly from WIPO at
 CC ftp.wipo.int/pub/published_pct_sequences.

XX New carcinoma associated gene or protein, useful for preparing a
 XX composition for diagnosing or treating carcinoma e.g., leukemia or
 XX lymphoma.

XX Claim 1; SEQ ID NO 295; 29pp; English.

XX The invention relates to new recombinant nucleic acids. The invention
 CC also relates to a host cell comprising a recombinant nucleic acid or
 CC expression vector, an expression vector comprising a recombinant nucleic
 CC acid, a recombinant protein, a method of screening for drug candidates, a
 CC method of screening for a bioactive agent capable of binding to a
 CC carcinoma associated protein (CAP) encoded by a nucleotide sequence, a
 CC method of screening for a bioactive agent capable of modulating the
 CC activity of a CAP, a method of evaluating the effect of a candidate
 CC carcinoma drug, a method of diagnosing carcinoma, a method for inhibiting
 CC the activity of a CAP, a method of treating carcinomas, a method of
 CC neutralising the effect of a CAP and a method of diagnosing carcinoma or
 CC propensity to carcinoma. A method of evaluating the effect of a candidate
 CC carcinoma drug comprises administering the drug to a patient, removing a
 CC cell sample from the patient and determining alterations in the
 CC expression or activation of a gene comprising the nucleotide sequence. A
 CC method of diagnosing carcinoma comprises determining the expression of
 CC one or more genes comprising the nucleic acid sequence in a first tissue
 CC type of a first individual and comparing the expression of the gene from
 CC a second normal tissue from the first individual or a second
 CC unaffected individual, where a difference in the expression indicates
 CC that the first individual has carcinoma. A method of inhibiting the
 CC activity of a CAP comprises binding an inhibitor to the CAP. Treating
 CC carcinomas comprises administering to a patient an inhibitor of CAP.
 CC Neutralising the effect of a CAP comprises contacting an agent specific
 CC for the CAP. The polypeptide specifically binds to the protein encoded by
 CC the nucleic acid. It comprises an antibody that specifically binds to the
 CC protein encoded by the nucleic acid. The nucleic acids are useful for
 CC preparing a composition for diagnosing or treating carcinoma e.g.,
 CC leukaemia or lymphoma. This sequence represents a murine carcinoma
 CC associated (CA) nucleic acid of the invention. Note: The sequence data
 CC for this patent did not form part of the printed specification but was

```
CC obtained in electronic format directly from USPTO at
CC seqdata.uspto.gov/sequence.html.

XX
XX Producing a transgenic bird or fish for commercial use, comprises
XX transfecting a packaging cell line with retroviral construct, recovering
XX recombinant retrovirus from the cell and infecting bird or fish egg with
XX the recombinant virus.
XX
XX Example 1; Fig 19; 68pp; English.
XX
XX The present invention describes a method for producing a transgenic bird
XX or fish. The method comprises transfecting a packaging cell line with a
XX retroviral construct, recovering recombinant retroviral particles from
XX the packaging cell line, and infecting a bird or a fish egg with the
XX recombinant retroviral particles. The retroviral construct comprises the
XX R and U5 sequences from a 5' lentiviral long terminal repeat (LTR) and a
XX self-inactivating 3' lentiviral LTR. Also described is a transgenic bird
XX or fish made by the above method and whose genome comprises a proviral
XX DNA that has a self-inactivating 3' lentiviral LTR. The method is useful
XX in producing transgenic animals, particularly transgenic birds and fish,
XX using retroviral constructs engineered to carry a transgene of interest.
XX The method is used to introduce the gene of choice into animals in order
XX to confer upon them desired attributes. The transgenic animals may find
XX use in commercial applications like biotechnology and agriculture. The
XX present sequence represents a murine lck promoter partial nucleotide
XX sequence, which is used in an example from the present invention

XX PT isolate candidate molecules for rational drug discovery programs.
XX
XX Claim 14; SEQ ID NO 24223; 1766pp; English.
XX
XX The invention relates to an isolated nucleic acid comprising any one of
XX CC the 6213 antisense sequences given in the specification where expression
XX CC of the nucleic acid inhibits proliferation of a cell. Also included are:
XX CC (1) a vector comprising a promoter operably linked to the nucleic acid
XX CC encoding a polypeptide whose expression is inhibited by the antisense
XX CC nucleic acid; (2) a host cell containing the vector; (3) an isolated
XX CC polypeptide or its fragment whose expression is inhibited by the
XX CC antisense nucleic acid; (4) an antibody capable of specifically binding
XX CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular
XX CC proliferation or the activity of a gene in an operon required for
XX CC proliferation; (7) identifying a compound that influences the activity of
XX CC the gene product or that has an activity against a biological pathway
XX CC required for proliferation, or that inhibits cellular proliferation; (8)
XX CC identifying a gene required for cellular proliferation or the biological
XX CC pathway in which a proliferation-required gene or its gene product lies
XX CC or a gene on which the test compound that inhibits proliferation of an
XX CC organism acts; (9) manufacturing an antibiotic; (10) profiling a
XX CC compound's activity; (11) a culture comprising strains in which the gene
XX CC product is overexpressed or underexpressed; (12) determining the extent
XX CC to which each of the strains is present in a culture or collection of
XX CC strains; or (13) identifying the target of a compound that inhibits the
XX CC proliferation of an organism. The antisense nucleic acids are useful for
XX CC identifying proteins or screening for homologous nucleic acids required
XX CC for cellular proliferation to isolate candidate molecules for rational
XX CC drug discovery programs, or for screening homologous nucleic acids
XX CC required for proliferation in cells other than S. aureus, S. typhimurium,
XX CC K. pneumoniae or P. aeruginosa. The present sequence is one of the target
XX CC prokaryotic essential genes. Note: The sequence data for this patent did

CC of this invention exhibit various activities including neuroleptic,
CC nootropic, antimanic and antidepressant. Furthermore, the screening
CC method used in MPHTS will be automated, such that a large number of test
CC compounds may be rapidly screened with a minimal amount of labour and
CC effort. This polynucleotide is the cDNA sequence of a gene that is
CC differentially expressed in mice in the presence of the therapeutic
CC compound valproate, given in an exemplification of the invention.

XX Antisense oligonucleotide compound that inhibits expression of mRNA
PT encoding human apolipoprotein B, useful for treating hyperlipidemia,
PT diabetes, obesity, von Gierke's disease, lipodystrophies, Cushing's
PT syndrome.
XX Example 33; SEQ ID NO 334; 483pp; English.

XX The invention relates to a novel antisense compound where the compound
CC hybridises to and inhibits expression of mRNA encoding human
CC apolipoprotein B (ApoB) after 16-24 hours by at least 30% in 80%
CC confluent HepG2 cells in culture at a concentration of 150 nM. The
CC compound of the invention demonstrates cardiovascular,
CC antiarteriosclerotic, antilipaeamic, antidiabetic, anorectic, cardiant,
CC vasotropic, hypotensive, anabolic, eating disorder-related, cytostatic,
CC endocrine, vasotropic, neuroprotective and nootropic activities and may
CC be useful for inhibiting the expression of apolipoprotein B in cells or
CC tissues in vivo in order to address a condition associated with abnormal
CC lipid or cholesterol metabolism. The compound may be useful for
CC decreasing circulating lipoprotein levels, triglyceride levels,
CC cholesterol levels, lipid levels, fatty acid levels, acute phase
CC reactants and chylomicrons and thus may be utilised during treatment of
CC hyperlipoproteinaemia, hyperlipidaemia, hypercholesterolaemia,
CC cardiovascular disorders, Von Gierke's disease, lipodystrophy, Cushing's
CC syndrome, sexual ateliotic dwarfism, hyperthyroidism, hypertension,
CC anorexia nervosa, Werner's syndrome, hepatoma, multiple myeloma, uraemia,
CC impotence, obstructive liver disease, Alzheimer's disease, dementia,
CC diabetes, obesity and atherosclerosis. The current sequence is that of
CC the human apolipoprotein B (ApoB) gDNA - SEQ ID 334 of the invention
CC which is located at chromosome 2p23-2p24.

XX
XX New recombinant nucleic acid encoding carcinoma associated protein,
PT useful for preparing compositions for treating carcinomas.
XX
XX Claim 1; SEQ ID NO 1145; 245pp; English.
XX
XX The invention relates to recombinant carcinoma associated (CA) nucleic
CC acid sequences from mouse and human (ADA01482-ADA03094), and to
CC recombinant carcinoma associated proteins (CAP) encoded by them. The
CC invention also encompasses expression vectors and host cells comprising a
CC CA nucleic acid, a polypeptide (especially an antibody) that specifically
CC binds to the protein, and a biochip comprising CA nucleic acid or
CC fragments thereof. The sequences of the invention were identified using
CC oncogenic retroviruses, which insert into the genome of the host organism
CC at random. Many of these do not carry transduced host oncogenes or
CC pathogenic trans-acting viral genes, meaning that cancer incidence is a
CC direct consequence of the effects of proviral integration into host
CC protooncogenes. The CA nucleic acid sequences can be used to diagnose
CC carcinoma (especially breast cancer, prostate cancer, lymphoma or
CC leukaemia) or a propensity to carcinoma by determination of the sequence
CC of a CA gene, or by determination of CA gene expression in particular
CC tissues. CA nucleic acids, proteins and antibodies are also useful as
CC therapeutic agents and in screening and evaluating drug candidates. The
CC present sequence represents a specifically claimed murine CA nucleic acid
CC sequence of the invention. Note: The complete sequence data for this
CC patent did not form part of the printed specification, but was obtained
CC in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences.

CC This invention relates to novel recombinant nucleic acids for use in
CC diagnosis and treatment of cancer, especially carcinomas, as well as the
CC use of compositions in screening methods. The compositions of the
CC invention may have cytostatic activity whilst the disclosed sequences may
CC be useful for gene therapy. The carcinoma associated nucleic acids and
CC proteins are useful for diagnosing and treating carcinomas, for example
CC lymphoma, breast cancer, prostate cancer or leukaemia, or for screening
CC drug candidates or bioactive agents capable of binding to, or modulating
CC the activity of, a carcinoma associated protein. The present sequence is
CC the genomic DNA sequence of the mouse Flt3 gene which is a carcinoma
CC associated gene of the invention.

XX Recombinant nucleic acid useful for diagnosis and treatment of carcinoma
PT comprises a nucleotide sequence.

XX Claim 1; SEQ ID NO 301; Opp; English.
XX
XX The present invention relates to novel DNA and protein sequences which
XX are associated with carcinomas. The sequences are useful for: (i) for
XX screening drug candidates; (ii) for screening of bioactive agent capable
XX of binding to Carcinoma Associated Protein (CAP); (iii) for screening of
XX a bioactive agent capable of modulating the activity of CAP; (iv) for
XX evaluating the effect of a candidate carcinoma drug; (v) for diagnosing
XX carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating
XX carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip;
XX (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for
XX determining Carcinoma Associated (CA) gene copy number. In addition, the
XX CA genes are useful as DNA vaccines and the CAP are useful as markers of
XX carcinoma including lymphoma. The present sequence is one such CA coding
XX sequence. Note: This patent is an equivalent to basic patent
XX US2002182586A1, for which no sequence data was published

XX New cancer-associated nucleic acid for diagnosing, preventing or treating
PT cancer (e.g. lymphoma) or for screening agents that may be used for
PT treating or preventing cancer.
XX Disclosure; SEQ ID NO 151; 143pp; English.

XX The present invention describes human cancer-associated (CA) nucleotide
CC sequences (1). Also described: (1) an expression vector comprising (1);
CC (2) a host cell comprising (1) or the expression vector; (3) a microarray
CC for detecting a CA nucleic acid; (4) an isolated polypeptide encoded
CC within an open reading frame of a CA sequence; (5) an isolated antibody,
CC or its antigen binding fragment, that binds to the above polypeptide; (6)
CC a hybridoma that produces the monoclonal antibody described above; (7) a
CC pharmaceutical composition comprising the antibody and a pharmaceutical
CC excipient; (8) a kit for detecting or diagnosing cancer cells, comprising
CC the above (monoclonal) antibody or polynucleotide that selectively
CC hybridises to any of the polynucleotide sequences mentioned above; (9)
CC methods for diagnosing cancer or for detecting the presence or absence of
CC cancer cells in an individual; (10) a method for inhibiting growth of
CC cancer cells in an individual; (11) a method for delivering a therapeutic
CC agent to cancer cells in an individual; (12) an electronic library
CC comprising the polynucleotide or polypeptide, or their fragments,
CC mentioned above; (13) a method of screening for anticancer activity; (14)
CC methods for detecting cancer associated with expression of a polypeptide
CC or the presence of the antibody in a test cell or serum sample; (15) a
CC method for screening for a bioactive agent capable of modulating the
CC activity of a CA protein encoded by the above nucleic acid molecule; and
CC (16) a method for treating cancers. (1) has cytostatic activity, and can
CC be used in gene therapy, in vaccines, as a tyrosine kinase antagonist,
CC and as a G-protein coupled receptor antagonist. The compositions and
CC methods of the present invention can be used for diagnosing, preventing
CC and treating cancer, especially lymphomas. They may also be used in
CC screening for agents that may be used for treating or preventing cancer.

CC The present sequence represents a human CA gene sequence, which is given
CC in the exemplification of the present invention. Note: The sequence data
CC for this patent did not form part of the printed specification, but was
CC obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences.

XX PT Nucleic acid array useful for detecting cancer associated nucleic acid,
XX comprises two or more nucleic acid probes.

XX PS Disclosure; SEQ ID NO 1416; 198pp; English.

XX CC The invention relates to a nucleic acid array for detecting a cancer
XX associated (CA) nucleic acid, comprising two or more nucleic acid probes.
XX The invention also relates to a peptide array comprising two or more
XX isolated polypeptides encoded by a CA nucleic acid sequence, a compound
XX that binds to a polypeptide, an isolated antibody or its fragment which
XX binds to a polypeptide, which is prepared by immunizing a host animal
XX with a composition comprising the polypeptide or its antigen binding
XX fragment and collecting cells from the host expressing antibodies against
XX the antigen or its antigen binding fragment, a composition comprising the
XX antibody and a carrier, a method of screening for anticancer activity, a
XX method of detecting a CA nucleic acid, a method of diagnosing cancer, a
XX method of treating cancer and a method of inhibiting expression of a CA
XX nucleic acid in a cell. The CA nucleic acids are useful for detecting CA
XX nucleic acids. The antibody is useful for detecting the presence or
XX absence of cancer cells in an individual which involves contacting cells
XX from the individual with the antibody and detecting a complex of a CA
XX protein from the cancer cells and the antibody, where the detection of
XX the complex correlates with the presence of cancer cells in the
XX individual. The composition is useful for inhibiting growth of cancer
XX cells in an individual or for delivering a therapeutic agent to cancer
XX cells in an individual. The invention is also useful for diagnosing
XX cancer, for treating cancer and for inhibiting expression of a CA gene in

CC a cell. This sequence represents murine cancer-associated genomic DNA of
CC the invention.

XX PT Novel human cancer associated protein encoded within open reading frame
XX of cancer associated gene, useful as targets for diagnosing cancer.

XX PS Disclosure; SEQ ID NO 843; 182pp; English.

XX CC The invention relates to cancer-associated proteins (CAP) and the cancer-
XX associated (CA) nucleic acids encoding them. The invention also relates
XX to a method for treating cancers involving administering to a patient an
XX inhibitor of CAP, and a method of screening for anticancer activity in a
XX potential drug involving providing a cell that expresses a CA gene,
XX contacting a tissue sample derived from a cancer cell with an anticancer
XX drug candidate and monitoring the effect of the anticancer drug candidate
XX on expression of the CA gene. The CAP proteins are useful for detecting
XX cancer associated with expression of a CAP protein in a test cell sample
XX and for screening for a bioactive agent capable of modulating the
XX activity of a CAP protein. The CA nucleic acids are useful for diagnosing
XX cancer, involving determining the expression of a CA nucleic acid in a
XX tissue. This sequence represents a murine CA gene of the invention. Note:
XX The sequence data for this patent did not form part of the printed
XX specification, but was obtained in electronic format directly from WIPO

XX
New recombinant nucleic acid encoding carcinoma associated protein,
PT      useful for preparing compositions for treating carcinomas.
XX
PS      Claim 1; SEQ ID NO 1145; 245pp; English.
XX
CC      The invention relates to recombinant carcinoma associated (CA) nucleic
CC      acid sequences from mouse and human (ADA01482-ADA03094), and to
CC      recombinant carcinoma associated proteins (CAP) encoded by them. The
CC      invention also encompasses expression vectors and host cells comprising a
CC      CA nucleic acid, a polypeptide (especially an antibody) that specifically
CC      binds to the protein, and a biochip comprising CA nucleic acid or
CC      fragments thereof. The sequences of the invention were identified using
CC      oncogenic retroviruses, which insert into the genome of the host organism
CC      at random. Many of these do not carry transduced host oncogenes or
CC      pathogenic trans-acting viral genes, meaning that cancer incidence is a
CC      direct consequence of the effects of proviral integration into host
CC      protooncogenes. The CA nucleic acid sequences can be used to diagnose
CC      carcinoma (especially breast cancer, prostate cancer, lymphoma or
CC      leukaemia) or a propensity to carcinoma by determination of the sequence
CC      of a CA gene, or by determination of CA gene expression in particular
CC      tissues. CA nucleic acids, proteins and antibodies are also useful as
CC      therapeutic agents and in screening and evaluating drug candidates. The
CC      present sequence represents a specifically claimed murine CA nucleic acid
CC      sequence of the invention. Note: The complete sequence data for this
CC      patent did not form part of the printed specification, but was obtained
CC      in electronic format directly from WIPO at
CC      ftp.wipo.int/pub/published_pct_sequences.

CC The invention relates to a nucleic acid array for detecting a cancer
 CC associated (CA) nucleic acid, comprising two or more nucleic acid probes.
 CC The invention also relates to a peptide array comprising two or more
 CC isolated polypeptides encoded by a CA nucleic acid sequence, a compound
 CC that binds to a polypeptide, an isolated antibody or its fragment which
 CC binds to a polypeptide, which is prepared by immunizing a host animal
 CC with a composition comprising the polypeptide or its antigen binding
 CC fragment and collecting cells from the host expressing antibodies against
 CC the antigen or its antigen binding fragment, a composition comprising a
 CC antibody and a carrier, a method of screening for anticancer activity, a
 CC method of detecting a CA nucleic acid, a method of diagnosing cancer, a
 CC method of treating cancer and a method of inhibiting expression of a CA
 CC nucleic acid in a cell. The CA nucleic acids are useful for detecting CA
 CC nucleic acids. The antibody is useful for detecting the presence or
 CC absence of cancer cells in an individual which involves contacting cells
 CC from the individual with the antibody and detecting a complex of a CA
 CC protein from the cancer cells and the antibody, where the detection of
 CC the complex correlates with the presence of cancer cells in the
 CC individual. The composition is useful for inhibiting growth of cancer
 CC cells in an individual or for delivering a therapeutic agent to cancer
 CC cells in an individual. The invention is also useful for diagnosing
 CC cancer, for treating cancer and for inhibiting expression of a CA gene in
 CC a cell. This sequence represents murine cancer-associated genomic DNA of
 CC the invention.

 PT
 XX Claim 1; SEQ ID NO 4491; 48pp + Sequence Listing; Japanese.

CC The invention relates to a polynucleotide having any of 6006 specific
 CC sequences (ABZ50888-ABZ56893), which are expressed by a fungus under
 CC specific culture conditions including one or more of eutrophic,
 CC oligotrophic, solid, early germination, alkaline, high temperature, low
 CC temperature or mold culture or polynucleotides stringently hybridising
 CC to these sequences. The polynucleotides are useful for monitoring the
 CC progress of fermentation and the growth conditions of a fungus,
 CC especially of Aspergillus oryzae which is widely used in industrial
 CC fermentation. Also monitoring for fungal contamination. Note: The
 CC sequence data for this patent did not form part of the printed
 CC specification, but was obtained in electronic format directly from WIPO
 CC at ftp.wipo.int/pub/published_pct_sequences

XX
XX The invention relates to an oligomeric compound comprising a first region
CC and a second region, where at least one region contains a modification,
CC and a portion of the oligomeric compound is targeted to a small non-
CC coding RNA target nucleic acid that is miRNA (micro-RNA), or its
CC precursor (primary-miRNA, pri-miRNA). Also included are a composition
CC comprising a first oligomeric compound and a second oligomeric compound
CC (where at least one of the oligomeric compounds contains a modification,
CC at least a portion of the first oligomeric compound is capable of
CC hybridizing with at least a portion of the second oligomeric compound,
CC and at least a portion of the first oligomeric compound is targeted to a
CC small non-coding RNA target nucleic acid), a pharmaceutical composition
CC comprising the composition cited above (and a carrier), a kit or assay
CC device comprising the composition, modulating the expression of a small
CC non-coding RNA target nucleic acid in a cell (or tissue or animal),
CC treating or preventing a disease or disorder associated with a small non-
CC coding RNA target nucleic acid, treating a condition in an animal,
CC treating or preventing a disease or disorder associated with CD3e,
CC methods of screening an oligomeric compound for an effect on miRNA
CC signaling, methods of screening a miRNA precursor for an effect in miRNA
CC signaling, methods of modulating translation (or apoptosis, conversion of

CC a precursor miRNA into miRNA, or cellular differentiation), identifying
CC an RNA transcript bound to a small non-coding RNA, arresting (or
CC delaying) entry of a cell at the G2/M phase, interfering with chromosome
CC segregation, a method of triggering apoptosis, detecting a miRNA
CC precursor, identifying a miRNA target, modulating cellular
CC differentiation, treating a condition associated with adipocyte
CC differentiation in an animal, treating/preventing a disease/disorder
CC associated with aberrant regulation of the cell cycle by miRNAs,
CC maintaining a pluripotent stem cell and identifying a small non-coding
CC RNA binding site. The oligomeric compound is targeted to a region
CC flanking a Drosha cleavage site within a pri-miRNA. It stimulates an
CC increase in expression of a pri-miRNA. The compounds and compositions are
CC useful for treating a disease or disorder resulting from chromosomal non-
CC disjunction, altered methylation, acetylation, or pseudouridylation state
CC of chromosomes, such as a hyperproliferative condition (e.g. cancer,
CC neoplasia or angiogenesis), diabetes (Type 2 diabetes), obesity,
CC hyperlipidemia, atherosclerosis, atherogenesis, hypertension, anorexia,
CC Alzheimer's disease, a central nervous system injury or neurodegenerative
CC disorder. The present sequence is a primary miRNA of the invention.

XX Novel murine polynucleotides that individually identify novel genes into
PT which a retroviral gene trap vector has integrated, useful in genomic
PT analysis and in discovery, development of therapeutic and diagnostic
PT agents.
XX
XX Claim 1; Page 75; 296pp; English.
XX

CC The invention describes an isolated murine polynucleotide (I) comprising
CC a contiguous stretch of at least 60 nucleotides of one of 265-677
CC nucleotide 891 OMNIBANK gene trapped sequences (GTSs) (S), given in the
CC specification. The novel genes and cells are useful in functional genomic
CC analysis and in the discovery and development of new therapeutic and
CC diagnostic agents and methods. (I) is useful for identifying the coding
CC regions of the murine genome, to isolate cDNAs, genomic clones, or full-
CC length genes/polynucleotides or homologues, heterologues, paralogues, or
CC orthologues that are capable of hybridising to one or more of the GTSs
CC under stringent conditions. (I) can be incorporated into a phage display
CC system that can be used to screen for proteins, or other ligands, that
CC are capable of binding an amino acid sequence encoded by an
CC oligonucleotide or polynucleotide sequence in at least one of the TS
CC sequences. (I) is useful in addressable arrays, such as gene chips, to
CC identify and characterise temporal and tissue specific gene expression,
CC to identify the gene of interest from many sources and for genetic
CC manipulations such as antisense inhibition and gene targeting. Decreasing
CC the level of expression of (I) and/or down regulating the activity of
CC peptides or proteins encoded by (I) is useful for treating development
CC and cell differentiation disorders, aging, cancer, autoimmune disease,
CC lupus, inflammatory disorders, skin disorders and degenerative disorders.

XX New genetically engineered nucleic acid molecule, useful for preparing an
PT agent for recombining a DNA molecule containing phic31 integrase
PT recognition sequences in a eukaryotic cell, a vertebrate or transgenic
PT organism.

XX Example 3; Page 71-73; 87pp; English.

XX This invention relates to novel genetically engineered nucleic acid
CC molecules encoding phic31 integrase (C31-Int), which has been codon
CC optimised for expression in eukaryotic host cells. The phic31 integrase
CC is a site specific recombinase (SSR) that catalyzes recombination between
CC two phic31 recognition sequences. The introduction of silent mutations
CC into the coding sequence changes the given codon to one that is most
CC frequently used in the respective host, which in turn alters expression
CC levels. Accordingly, using this ability to generate controlled and
CC permanent modifications in eukaryotic genomes has various research
CC applications including the study of gene function and the creation of
CC disease models, as well as gene therapy for medical applications, and the
CC design of economically important animals and crops. Furthermore, the
CC phic31 integrase of the invention is useful for preparing an agent for
CC recombining a DNA molecule containing phic31 integrase recognition
CC sequences in a eukaryotic cell, a vertebrate or transgenic organism. This
CC polynucleotide sequence is the murine downstream homology arm located in
CC the ROSA26 promoter targeting vectors and required for homologous
CC recombination in ES cells, used in an exemplification of the invention.

XX Generating transgenic eukaryotic cells having a modified Rosa26 locus
PT comprises introducing a functional DNA sequence into the Rosa26 locus of
PT starting eukaryotic cells by homologous recombination with a targeting
PT vector.
XX
PS Disclosure; SEQ ID NO 5; 26pp; English.

XX The specification describes a method for targeted transgenesis, which
CC generates transgenic eukaryotic cells having a modified Rosa26 locus. The
CC method comprises introducing a functional DNA sequence into the Rosa26
CC locus of starting eukaryotic cells by homologous recombination with a
CC targeting vector comprising the functional DNA sequence flanked by DNA
CC sequences homologous to the Rosa26 locus. Rosa26 supports the
CC preservation of inherent activity of heterologous promoters inserted
CC through homologous recombination into the locus. The method of the
CC invention is useful for generating transgenic eukaryotic cells. The
CC eukaryotic cells are useful for gene function studies, drug development
CC and as disease models. ADQ76466-ADQ76467 represent 5' and 3' arms of a
CC Rosa26 targeting vector. These two sequences enable homologous
CC recombination into the Rosa locus.

XX
XX Novel vector comprising homologous targeting cassette harboring
PT functional DNA sequence, and expression cassette harboring DNA sequence
PT coding for first detectable marker, useful for targeted homologous
PT recombination of eukaryotic cells.
XX
XX Example 1; SEQ ID NO 5; 46pp; English.
XX
XX The present invention relates to a vector for targeted homologous
CC recombination of eukaryotic cells, comprising a homologous targeting
CC cassette harbouring a functional DNA sequence, and an expression cassette
CC harbouring a functional DNA sequence coding for a first detectable
CC marker, with the expression cassette being connected with the homologous
CC targeting cassette so as to allow distinction between targeted and non-
CC targeted cells. The vector is useful for homologous recombination of
CC eukaryotic cells, which is useful for preparing transgenic tissues,
CC organs and/or multi-cell organisms. The transgenic multi-cell organism is
CC a non-human mammal, most preferably mouse. The present sequence is a
CC fragment of the murine Rosa26 gene used in the exemplification of the
CC invention.

 XX
 XX New genetically engineered nucleic acid molecule, useful for preparing an
 PT agent for recombining a DNA molecule containing phic31 integrase
 PT recognition sequences in a eukaryotic cell, a vertebrate or transgenic
 PT organism.
 XX
 XX Example 3; Page 73-79; 87pp; English.
 PS
 XX This invention relates to novel genetically engineered nucleic acid
 CC molecules encoding phic31 integrase (C31-Int), which has been codon
 CC optimised for expression in eukaryotic host cells. The phic31 integrase
 CC is a site specific recombinase (SSR) that catalyzes recombination between
 CC two phic31 recognition sequences. The introduction of silent mutations
 CC into the coding sequence changes the given codon to one that is most
 CC frequently used in the respective host, which in turn alters expression
 CC levels. Accordingly, using this ability to generate controlled and
 CC permanent modifications in eukaryotic genomes has various research
 CC applications including the study of gene function and the creation of
 CC disease models, as well as gene therapy for medical applications, and the
 CC design of economically important animals and crops. Furthermore, the
 CC phic31 integrase of the invention is useful for preparing an agent for
 CC recombining a DNA molecule containing phic31 integrase recognition
 CC sequences in a eukaryotic cell, a vertebrate or transgenic organism. This
 CC polynucleotide sequence is the pRosa12 vector comprising an adenoviral
 CC splice acceptor site inserted between the two ROSA26 promoter homology
 CC arms, used in an exemplification of the invention.

 PS
 XX The present sequence for mouse FosB DNA is used to generate a targeting
 CC cassette and vector in the invention of novel targeting constructs and
 CC methods of using them for creating transgenic animals in which at least 1
 CC single-copy, non-essential gene is replaced with a reporter expression
 CC cassette (e.g. a luciferase gene linked to a promoter heterologous to the
 CC single-copy, non-essential gene). The single-copy, non-essential gene may
 CC be selected from vitronectin (Vn), fosB and galactin 3. The promoter
 CC element may be selected from VEGF, VEGFR and Tie2. The constructs may
 CC contain a selectable marker e.g. neomycin phosphotransferase II,
 CC chloramphenicol acetyltransferase and thymidine kinase. The constructs
 CC are useful for creating transgenic animals in which at least 1 single-
 CC copy, non-essential gene is replaced with a reporter expression cassette.
 CC Methods of using these animals are also described

XX Novel fusion protein useful for recombining DNA molecules in eukaryotic
PT cells has recombinase protein which is linked to signal peptide domain
PT which directs nuclear import of fusion protein in eukaryotic cells.
XX Example 4; Page 135-138; 150pp; English.
XX The invention comprises the amino acid and coding sequences of fusion
CC proteins that contain a recombinase domain and a signal peptide domain
CC which directs nuclear import of the fusion protein in eukaryotic cells.
CC The fusion proteins of the invention are useful for recombining the DNA

CC molecules of cells or organisms containing recombinase recognition
CC sequences for the recombinase domain of the fusion proteins. The fusion
CC proteins of the invention are useful for studying gene function at
CC various developmental stages and for the creation of transgenic
CC organisms. The C31-Int recombination system of the invention can be used
CC for the site-specific integration of foreign DNA into the genome of
CC mammalian cells (e.g. for gene therapy). The present DNA sequence
CC represents an oligonucleotide that was used in the invention

 /note="Vector: PWD42nv; Purified genomic DNA from M.
 musculus C57BL/6J (female) was obtained from the Jackson
 Laboratory Mouse DNA Resource
 (http://www.jax.org/resources/documents/dnares/). The DNA
 was hydrodynamically sheared by repeated passage through a
 0.005 inch orifice at constant velocity. The sheared DNA
 was blunt end-repaired with T4 DNA polymerase and T4
 polynucleotide kinase. Adaptor oligonucleotides were
 ligated to the blunt ends in high molar excess. The
 adaptor DNA was purified and size-selected for a 9.5 to
 10.5 kb range using preparative agarose gel
 electrophoresis. Vector DNA was prepared from a derivative
 of PWD42 [gi4732114|gb|AF129072.1], a copy-number
 inducible derivative of plasmid R1. The vector was ligated
 with adaptors complementary to the insert adaptors and
 purified. The sheared, adaptor mouse DNA was annealed to
 adaptor vector DNA, and transformed into

chemically-competent E. coli XL10-Gold (Stratagene) cells
 and selected for ampicillin resistance."

Site 2: NotI; Mouse cDNA project by the Laboratory of
Genetics, National Institute on Aging (NIA), Intramural
Research Program, NIH (http://lgsun.grc.nia.nih.gov/cDNA).
This is a long-transcript enriched cDNA library (Ref.
Genome Res. 11: 1553-1558 (2001). [PMID: 11544199]). Total
RNAs were extracted from 1 embryo at 13.5-days postcoitum.
Double-stranded cDNAs were synthesized with an Oligo(dT)
primer [Invitrogen]:
5'-pGACTAGTTCAGATCGCGCGCCCTTTT-3' from
3ug of total RNA, treated with T4 DNA polymerase, and
purified by ethanol-precipitation. The cDNAs were ligated
to lone-linker L1-Sal4, purified by phenol/chloroform, and
separated from free linkers by Centricon 100. Then, the
cDNAs were amplified by long-range high fidelity PCR using
Ex Taq polymerase (Takara) with a primer Sal4-S. The
products were purified by phenol/chloroform and Centricon
100. The cDNAs were digested with SalI and NotI enzymes
and cloned into SalI/NotI site of pCMV-SPORT6 plasmid
vector. The DH10B E. coli host was transformed with the
ligation mixture by the standard chemical method. The
average insert size is about 3.0Kb. The library was
constructed by Yulan Piao."

/notes="Vector: PWD42nv; Purified genomic DNA from M. musculus C57BL/6J (female) was obtained from the Jackson Laboratory Mouse DNA Resource

(http://www.jax.org/resources/documents/dnares/). The DNA

was hydrodynamically sheared by repeated passage through a

0.005 inch orifice at constant velocity. The sheared DNA

was blunt end-repaired with T4 DNA polymerase and T4

polynucleotide kinase. Adaptor oligonucleotides were

ligated to the blunt ends in high molar excess. The

adapted DNA was purified and size-selected for a 9.5 to

10.5 kb range using preparative agarose gel

electrophoresis. Vector DNA was prepared from a derivative

of pWD42 (G1[4732114]9b|AF129072.1), a copy-number

inducible derivative of plasmid R1. The vector was ligated

with adaptors complementary to the insert adaptors and

purified. The sheared, adapted mouse DNA was annealed to

adapted vector DNA, and transformed into

chemically-competent E. coli XL10-Gold (Stratagene) cells

and selected for ampicillin resistance."

 /note="Vector: PWD42nv; Purified genomic DNA from M.
 musculus C57BL/6J (male) was obtained from the Jackson
 Laboratory Mouse DNA Resource
 (http://www.jax.org/resources/documents/dnares/). The DNA
 was hydrodynamically sheared by repeated passage through a
 0.005 inch orifice at constant velocity. The sheared DNA
 was blunt end-repaired with T4 DNA polymerase and T4
 polynucleotide kinase. Adaptor oligonucleotides were
 ligated to the blunt ends in high molar excess. The
 adaptor DNA was purified and size-selected for a 9.5 to
 10.5 kb range using preparative agarose gel
 electrophoresis. Vector DNA was prepared from a derivative
 of pWD42 [gi|4732114|gb|AF129072.1], a copy-number
 inducible derivative of plasmid R1. The vector was ligated
 with adaptors complementary to the insert adaptors and
 purified. The sheared, adaptor mouse DNA was annealed to
 adaptor vector DNA, and transformed into
 chemically-competent E. coli XL10-Gold (Stratagene) cells
 and selected for ampicillin resistance."

 /note="Vector: PWD42nv; Purified genomic DNA from M.
 musculus C57BL/6J (male) was obtained from the Jackson
 Laboratory Mouse DNA Resource
 (http://www.jax.org/resources/documents/dnares/). The DNA
 was hydrodynamically sheared by repeated passage through a
 0.005 inch orifice at constant velocity. The sheared DNA
 was blunt end-repaired with T4 DNA polymerase and T4
 polynucleotide kinase. Adaptor oligonucleotides were
 ligated to the blunt ends in high molar excess. The
 adapted DNA was purified and size-selected for a 9.5 to

10.5 kb range using preparative agarose gel
 electrophoresis. Vector DNA was prepared from a derivative
 of pWD42 (gi|4732114|gb|AF129072.1), a copy-number
 inducible derivative of plasmid R1. The vector was ligated
 with adaptors complementary to the insert adaptors and
 purified. The sheared, adapted mouse DNA was annealed to
 adaptor vector DNA, and transformed into
 chemically-competent E. coli XL10-Gold (Stratagene) cells
 and selected for ampicillin resistance."

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
